1. Overview

This document outlines the functional requirements for a comprehensive tax audit management system. The business use cases together form an integrated, risk-intelligent system that automates the entire tax audit lifecycle, from annual planning to final case closure. The system continuously applies risk-based filtering to select high-priority audit candidates, then intelligently allocates cases to auditors whose skills and current workload best match the requirements. Throughout execution, auditors leverage automated tools such as computer-assisted audit techniques, third-party data matching, and industry benchmarking to detect anomalies and gather evidence efficiently. The system also supports specialized audit types, including transfer pricing audits with cross-border arm's-length analysis and joint audits enabling multiple tax authorities to collaborate in shared workspaces. When external data sources are unavailable or taxpayer information is incomplete, the system gracefully falls back to manual processes: auditors can request documents via a secure taxpayer portal, trigger alternative delivery methods for undelivered notices, or escalate cases for manual review. After audit completion, the system supports quality assurance reviews through automated case sampling and can automatically escalate cases to fraud investigation based on configured indicators. Similarly, capacity overrides, random case sampling, and override justifications ensure operational flexibility without sacrificing auditability. Every action – from plan versioning to daily work logging – is recorded in an immutable audit trail. The design

balances automation with human judgment, ensuring that the tax authority can maintain high compliance and revenue assurance even when external integrations fail or exceptional situations arise.

1.01 Structure

Use Case ID	Use Case Name	Description
BUC-TA-001	Create and Approve Annual Audit Plan	The audit team prepares the annual plan. It is reviewed by the director, receives business feedback, and is approved by senior management.
BUC-TA-002	Cascade Audit Plan to Case Level	Authorized staff create individual cases from the approved plan. Each gets a unique number and electronic dossier. All changes are logged
BUC-TA-003	Select and Prioritize Audit Cases	The Process Owner reviews risk-based cases and requests, selects within staff capacity, and assigns treatment plans.
BUC-TA-004	Assign Cases to Auditors	Cases are automatically assigned based on skills and

		with auditors.
BUC-TA-021	Execute Joint Audit	Enable multiple tax authorities to collaborate on a single taxpayer audit through a shared workspace.
BUC-TA-022	Complete and Finalize Audit	Finalize audit results, prepare reports, conduct exit conferences, issue assessment notices, and close the case.
BUC-TA-023	Conduct Quality Assurance Review	Select completed audits, review them for quality, provide feedback, and track improvements.
BUC-TA-024	Trigger Fraud Investigation	Automatically escalate cases to fraud investigation when suspicious activity is detected during an audit.

Business Use Case Detail Description

The system manages the end-to-end audit lifecycle, from strategic planning to finalization and quality review, using risk-based selection and supporting multiple audit methodologies.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION		Issue No.: 3	Page No.: Page 9 of 154

Audit Planning and Setup: Enables annual plan creation and approval (the Audit Team creates a yearly plan with case volumes, the system checks staff capacity, and the plan goes through Director and Senior Management approval with version tracking), cascades plans to trackable cases (after approval, the Team Leader generates individual cases with unique numbers, electronic files, and links back to the annual plan), and automates case assignment based on auditor skills and workload (the system matches cases to auditors by skills, experience, location, and workload; team leaders can override with a reason; timers and alerts track start delays).

Audit Execution and Management: Provides auditors a workspace to plan (auditors review taxpayer data, identify risks, request documents, research industry benchmarks, choose sampling methods, and submit plans for team leader approval), request documents (taxpayers upload via secure portal; if no response, reminders and escalation follow), analyze data (using BI tools, internal records, third-party sources like banks and customs, and industry comparisons), and record work (daily logs of time, tasks, findings, and evidence; progress updates against the plan). Team leaders monitor progress (dashboard showing on-track status; automated warnings for no activity or suspicious patterns) and provide approvals (plans, draft reports, and interview records can be approved or sent back for changes with comments).

Specialized Audit Processes: Supports transfer pricing audits with cross-border analysis (examining related-party transactions to ensure arm's-length pricing using methods like CUP or TNMM) and benchmarking (comparing taxpayer data with industry databases and comparable companies), and joint audits with collaborative workspaces for multiple tax authorities (shared online workspace where teams from different authorities access taxpayer information, send queries, upload documents, and produce consolidated or segregated reports with multi-level approvals).

Reporting, Completion, and Oversight: Manages exit conferences (scheduling, conducting, and documenting the final meeting between auditor and taxpayer; notes approved by team leader and confirmed by taxpayer), generates final reports and assessment notices (reports routed through approval thresholds; system generates unique tracking numbers for assessment notices and sends via portal, email, or mail), handles taxpayer

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 10 of 154

objections (taxpayer can accept or object within a set period; objections with evidence are reviewed; valid objections lead to revised reports; invalid ones are documented and original stands), and includes quality assurance (system selects closed cases for review using sampling methods; QA team documents findings and assigns follow-up actions like training or process changes) and performance reporting (management reports on productivity, audit yield, case status, and other KPIs for decision-making).

1.02 Create and Approve Annual Audit Plan

Attribute	Description
Use Case ID	BUC-TA-001
Use Case Name	Create and Approve Annual Audit Plan
Description	The Audit Team prepares the annual audit plan based on the year's priorities, case volumes, estimated effort, and available staff. The plan is reviewed by the Audit Director, shared with business units for feedback, and sent to Senior Management for final approval.
Actors	- Primary: Audit Team, Audit Director, Senior Management / Risk Committee - Secondary: Business Units (provide feedback)
Pre-Condition	- Annual planning has begun, priorities are defined. - Staff availability and effort guidelines are ready. - Authorised users have access to the planning dashboard.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 11 of 154

Triggers	The Audit Team starts a new plan from the planning dashboard.
Normal Workflow	1. Audit Team creates a new plan and enters a number of cases per audit type. 2. System shows total effort vs. available staff capacity. 3. Audit Team adjusts numbers as needed and saves the draft. 4. Audit Team sends the draft plan to the Audit Director. 5. Audit Director reviews the plan. 6. Audit Director approves the plan. 7. System automatically shares the approved plan with all business units, requesting feedback by a deadline. 8. Business units review and submit comments. 9. Audit Director reviews all feedback, makes necessary changes (new version), and marks the 10. plan as ready for Senior Management. 11. Plan is sent to Senior Management / Risk Committee for final approval. Once approved, the Director and all business units are informed that the plan is final.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 12 of 154

Alternative Flow	AF1. Plan Rejected by Director (during step 6) Flow: 1. Director returns plan with comments 2. Audit Team revises 3. Resubmits 4. New version created 5. Repeat steps 13 until approved. AF2. No Feedback from Business Units (after step 8) Flow: 1. Deadline passes without response 2. Reminders sent 3. if still no response, 4. Director may proceed without feedback and notes the lack of response. AF3. Major Amendments Trigger Rereview (after step 9) Flow: 1. Director makes significant changes 2. may send updated plan for another feedback round 3. steps 4-6 repeated. AF4. Senior Management Rejection (during step 10) Flow: 1. Senior Management rejects with comments
-------------------------	--

Issue No.

3

Page No.:

Page 13 of 154

	2. plan returns to Director for revision 3. Director resubmits. AF5. Capacity Exceeded – Team Cannot Reduce Further (during step 3) Flow: 1. Total effort > capacity after adjustments 2. Team submits request to proceed with explanation Director approves/rejects 3. if approved, override noted; 4. if rejected, plan returns for revision.
Postconditions	Plan approved: A final, approved annual audit plan exists, with a history of all previous versions. Notifications sent: Everyone who needs to know has been informed that the plan is final. Ready for next step: The plan is now ready to be broken down into individual audit cases. Audit trail maintained: Every action, version, and piece of feedback has been recorded.
Business Rules	BR-001: Plan must be based on tactics, volumes, effort, and skills. BR-002: Director approval required before business unit notification. BR-003: Senior Management approval required for finalisation. BR-004: All versions and feedback must be retained for audit trail.

Exceptions	Database error – system rolls back and displays error message.
Information Requirements	● Final approved audit plan (exportable), ● Feedback summary, ● Version history log.
Assumptions	Staff capacity data and effort guidelines are accurate and up-to-date.
Notes	Planning is an iterative process, so keeping track of versions is very important. Input from business units helps ensure the plan is realistic and workable.

	file with basic taxpayer information, and is linked back to the original plan so progress can be tracked.
Actors	Primary: Audit Group / Team Leader
Pre-Condition	- An approved annual audit plan is in place. - The user has permission to create cases, taxpayer data with risk scores is available, and case templates are ready.
Triggers	The Audit Group or Team Leader selects "Cascade to Cases" from the approved plan dashboard.
Normal Workflow	- The person opens the approved plan and reviews the planned numbers for each audit type, region, and taxpayer group. - They select "Generate Cases" and set filters (region, taxpayer type, risk score) to find the right taxpayers. - A list of taxpayers matching the filters appears, ranked by risk score. They pick individuals or accept a suggested list. - They review the list and can add or remove taxpayers manually. - They confirm the list. For each taxpayer, an individual audit case is automatically created. - Each new case receives a unique reference number and is linked to the annual plan.

Page 17 of 154

7. An electronic case file is created for each case, containing the taxpayer's basic information, why the case was selected, and the audit purpose.
8. Each case is given tentative start and end dates based on the plan's timeline.
9. The person may add preliminary notes or special instructions.
10. The annual plan is updated to show how many cases have been created so far.
11. The audit team is notified that new cases are ready to be assigned.

Issue No.

3

Page No.:

Page 18 of 154

Alternative Flow**AF1. No Approved Plan Available (before starting)****Flow:**

1. The person tries to start cascading but there is no approved annual plan.
2. A message appears explaining that an approved plan is needed first.
3. They are directed to the place where plans are created.

AF2. No Taxpayers Match the Filters (during step 3)**Flow:**

1. After setting filters, no taxpayers are found that match.
2. A message appears saying "No taxpayers found matching your criteria."
3. Suggestions are offered to broaden the filters or check the values entered.
4. The person can adjust the filters and try again, or choose to add taxpayers manually (see AF4).

AF3. Fewer Taxpayers Found Than Planned (during step 3)**Flow:**

1. The filters find some taxpayers, but fewer than the number planned for that category.
2. A warning appears: "Only 25 taxpayers found, but the plan calls for 40."
3. The person can either broaden the filters to find more, or proceed with the ones they have.
4. If they choose to proceed with fewer, they must write a short explanation for why.

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 19 of 154

AF4. Manual Case Creation Needed (during step 4)**Flow:**

1. The person needs to add a taxpayer that didn't come up in the filtered list.
2. They select "Add Manual Case".
3. A search tool appears where they can find the specific taxpayer by name or ID.
4. They select the taxpayer and it is added to the list of cases to be created.

AF5. Duplicate Case Detected (during step 5)**Flow:**

1. The system checks and finds that a selected taxpayer already has an open audit case.
2. The duplicate taxpayer is highlighted and a warning appears.
3. The person can either remove that taxpayer from the list, or override the warning with a written explanation if they believe a new case is still needed.
4. If they override, the reason is recorded and the new case is created.

AF6. Timeline Adjustment Needed (during step 8)**Flow:**

1. The person wants to change the start or end date for a specific case.
2. They make the change, and a box appears asking for a reason.

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 20 of 154

	3. They write the reason. 4. The change, along with the reason, who made it, and when, is recorded.
Post-Condition	Cases created: Individual audit cases now exist, each with its own unique reference number. Information attached: Each case has its basic taxpayer information, selection reason, and purpose already filled in. Linked to the plan: Every case is connected to the annual audit plan it came from. Ready for next step: The cases are now ready to be assigned to auditors. Plan updated: The annual plan shows how many cases have been created so far. Audit trail kept: Every action, including any overrides or date changes, has been recorded.
Business Rules	BR-001: Every audit case must be connected to one annual audit plan. BR-002: Cases can only be created from a fully approved plan. BR-003: Unique reference number is autogenerated. BR-004: If fewer cases than planned, written reason required. BR-005: Duplicate case creation requires written reason. BR-006: Date changes must record reason, user, and timestamp.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 21 of 154

Exceptions	Database error – rollback and notify administrator.
Information Requirements	• A list of all cases that were created. • A progress report showing how the plan is being filled . • A log of any overrides and the reasons for them . • A record of any date changes and why they were made
Assumptions	Risk scores are pre-calculated and available.
Notes	This step connects the high-level annual plan to the actual day-to-day work of auditing. Being able to add cases manually gives flexibility for urgent or special situations that the automatic filters might miss.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 23 of 154

Description	The Process Owner decides which cases will actually be audited. This means looking at risk-identified cases and requests from other departments or outside sources. The final selection must fit within available staff capacity. Selected cases are given an initial treatment plan.
Actors	• Primary: Process Owner • Secondary: Risk Directorate, Other Directorates, External Stakeholders (provide requests)
Pre-Condition	• Risk profiling is complete and potential cases are identified. • Staff capacity is updated, audit types and templates are set, and the Process Owner has the required permissions.
Triggers	The Process Owner opens the "Case Selection and Prioritization" dashboard.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 24 of 154

Normal Workflow

1. A combined list appears showing cases from three sources: risk-ranked cases, requests from other departments, and requests from outside.
2. The Process Owner filters the list by location, taxpayer type, audit type, risk score, or source.
3. For any case, they can look at the details, including the specific risk indicators.
4. Information is shown about available staff capacity alongside estimated effort for each audit type.
5. The Process Owner picks cases to audit, one by one or using "Select Top X by Risk".
6. As cases are selected, a running total shows effort chosen compared to available capacity.
7. The selected cases are arranged in order of priority (default is risk score).
8. The Process Owner reviews and confirms the final list.
9. A final list of cases to be audited is created, and each is marked as "Selected for Audit".
10. For each case, the Process Owner chooses an initial treatment plan (e.g., "desk audit" or "comprehensive audit").
11. Formal case records are created and the selection screen is updated.

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page **25** of **154**

Alternative Flow

AF1. Not Enough Staff Capacity (during step 6)

Flow:

1. As the Process Owner selects cases, the running total shows that the estimated effort has gone over the available staff capacity.
2. A warning appears, highlighting how much over capacity they are and suggesting which cases might be removed to get back within limits.
3. The Process Owner can either:
4. a. Remove some lower-priority cases to stay within capacity. b. Request an override by providing a written justification and sending it to the Audit Director for approval.
5. If an override is requested, the request is marked as "Pending" and the Audit Director is notified.
6. The Audit Director reviews the request and either approves or rejects it.
7. The Process Owner cannot finalize the selection until a decision is made.
8. If approved, selection continues with the override noted. If rejected, the Process Owner must reduce the selection.

AF2. Missing Risk Information for a Case (during step 3)

Flow:

1. The Process Owner finds a case that does not have enough risk information to make a decision.
2. They mark the case as "Incomplete Risk Data".

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

3

Page No.:

Page 26 of 154

3. An automatic request is sent to the Risk Directorate asking them to provide more analysis.
4. The Process Owner sets the case aside and continues with others.
5. When the Risk Directorate updates the case with more information, the Process Owner receives a notification and can come back to it.

AF3. Urgent Request Arrives During Selection (at any step)**Flow:**

1. While the Process Owner is working, an urgent audit request arrives (for example, from a minister or a senior official).
2. A special notification appears with details of the urgent case and a button to "Handle Now".
3. The Process Owner can stop what they are doing and review the urgent case immediately.
4. If they decide to include it, it is added to the selected list.
5. The application automatically adjusts the capacity calculations and suggests which lower-priority cases might need to be deferred.
6. The Process Owner confirms the adjustments.
7. The urgent handling and the reason for it are recorded.

AF4. No Cases Selected (during step 5)**Flow:**

1. The Process Owner decides not to select any cases at this time (for example, because of staff shortages or a change in priorities).

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

ADMINISTRATION**

2. They select "Skip Selection Cycle".
3. A box appears asking for a reason (such as "insufficient high-risk cases" or "staff unavailable").
4. They enter the reason.
5. The decision and the reason are recorded, and the Audit Director is notified.
6. All cases remain in the pool for the next selection cycle.

AF5. Random Selection for Risk Model Feedback (during step 5)**Flow:**

1. The Process Owner wants to include some randomly selected cases to help test and improve the risk model.
2. They select "Add Random Sample".
3. They are asked how many random cases they want and what filters to apply (e.g., "random cases from the manufacturing sector").
4. The tool randomly picks the requested number of cases from the eligible pool.
5. These random cases are added to the list alongside the risk-based ones.
6. The Process Owner can adjust or confirm the selection.
7. The random cases are clearly marked so everyone knows they were chosen by chance, not by risk score.

AF6. Change a Treatment Plan (during step 10)**Flow:**

1. After attaching a treatment plan, the Process Owner realizes a different plan would be more suitable for a particular case.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 28 of 154

	2. They select that case and choose "Change Treatment Plan". 3. A list of available plan types appears. 4. They pick the new plan and write a short reason for the change. 5. The case is updated and the change is recorded. AF7. Mark a Case as Joint Audit (during step 5 or 7) Flow: 1. The Process Owner identifies a case that should be handled as a joint audit (involving multiple auditors or teams). 2. They select the case and choose "Mark as Joint Audit". 3. The case is now marked as "Pending Joint Audit Formation". 4. This case will now follow the joint audit process instead of the individual audit path.
Post-Condition	Cases selected: The chosen cases are now loaded into the tool with their treatment plans. They are marked as "Selected for Audit". Cases deferred: Any cases that were considered but not selected remain in the pool for future cycles, marked as "Deferred". Capacity recorded: The tool now knows how much of the available staff capacity has been used by this selection. Audit trail kept: Every decision, override, and justification has been recorded.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 29 of 154

Business Rules	BR-001: Cases chosen based on risk priority unless random selection is used. BR-002: Internal/external requests must be considered but not necessarily accepted. BR-003: Total effort cannot exceed capacity without Director approval. BR-004: Every selected case must have an initial treatment plan.
Exceptions	Database timeout or risk engine unavailability – system uses last snapshot and alerts admin.
Information Requirements	• The final list of selected cases, with their treatment plans. • A report showing how much of the available staff capacity has been used . • A log of any override requests and the decisions made on them . • A list of cases that were considered but not selected this time
Assumptions	Risk engine output is available. Staff capacity data is current.
Notes	This is one of the most important steps in the audit process. Getting the selection right means that audit resources are focused on the cases that matter most.

Activity Diagram

1.05 Assign Cases to Auditors

Attribute	Description
Use Case ID	BUC-TA-004
Use Case Name	Assign Cases to Auditors
Description	Cases are automatically assigned to auditors based on their skills, workload, and location. Team leaders can step in and make changes if needed. When a case is assigned, the auditor is notified. If a case sits untouched too long, an alert is raised.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 31 of 154

Actors	• Primary: System(The automatic assignment feature) • Secondary:Auditor, Team Leader
Pre-Condition	• Selected audit cases are ready. • Auditor details, assignment rules, and alert timelines for starting cases are all defined.
Triggers	The automatic assignment starts whenever new cases become available. A Team Leader can also start the assignment manually at any time from the case management screen.
Normal Workflow	1. All unassigned cases marked "Selected for Audit" are gathered. 2. For each case, the type of audit, complexity, needed skills, and location are considered. 3. Available auditors are checked against what the case needs – their skills, workload, experience, and location. 4. The best-matched auditors are ranked, aiming for balanced workloads. 5. The case is assigned to the highest-ranked auditor. 6. The assignment is recorded with the date, time, and the rules used. 7. The auditor and team leader are notified. 8. A timer starts counting the days until the auditor should start work (time allowed depends on case type). 9. If the case is still "Assigned" and not "In Progress" within the allowed time, an alert is sent to the team leader.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 32 of 154

	10. The team leader reviews the alert and may contact the auditor or move the case.
--	---

**INFORMATION NETWORK SECURITY
ADMINISTRATION****Alternative Flow****AF1. No Suitable Auditor Found (during step 3)****Flow:**

1. The automatic check finds no auditor who matches what the case needs.
2. The case is marked as "Unassigned – No Match," and the team leader is told with details of what skills are needed.
3. The team leader looks at the case and can a. Assign it manually to someone, even if they are not a perfect match. b. Ask for someone to be trained or given temporary approval to handle this type of case. c. Pass the problem up to the Process Owner for advice.
4. Whatever they decide, the reason is recorded.

AF2. Team Leader Steps In to Assign a Case Manually (at any step)**Flow:**

1. The team leader opens the list of unassigned cases or finds a specific case.
2. They choose "Assign Manually."
3. A list of available auditors appears, showing their skills, how busy they are, and what they are already working on.
4. The team leader picks an auditor and writes a short reason for doing it manually instead of letting it happen automatically.
5. The case is assigned, and the reason is recorded.
6. Notifications are sent just like in the normal flow.

AF3. Moving a Case to a Different Auditor (at any step)**Flow:**

1. The team leader opens a case that has already been assigned.
2. They choose "Re-assign Case".

Company Name:

የኢ.ንፎ.ር.ሚ.ሽ.ን መረብ ደህንነት አስተዳደር

**INFORMATION NETWORK SECURITY
ADMINISTRATION**

Document No.:

OT/AS/001

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 34 of 154

3. A box appears asking for a reason (for example, "auditor on leave", "workload too heavy", "conflict of interest").
4. The Team Leader picks a new auditor from the list.
5. The change is recorded with the reason, the date and time, and who the case was moved from.
6. Both the old and new auditors are told about the change.
7. The case history now shows the transfer.

AF4. Alert Raised – Case Not Started (during step 9)**Flow:**

1. A case has been sitting in "Assigned" status longer than it should without anyone starting work.
2. An alert is sent to the Team Leader with details of the case and how many days have passed.
3. The Team Leader reviews it and can: a. Contact the auditor to ask what is happening. b. Give the auditor more time, writing down why. c. Move the case to another auditor (following AF3).
4. Whatever they decide is recorded.

AF5. Assigning Multiple Cases at Once (during step 2 of AF2)**Flow:**

1. The Team Leader picks several cases from the unassigned list.
2. They choose "Assign in Bulk".
3. A list of available auditors appears.
4. The Team Leader can either: a. Pick one auditor to get all the selected cases. b. Choose "Spread Evenly" and let the work be shared out fairly among qualified auditors.
5. They confirm the assignment.

**INFORMATION NETWORK SECURITY
ADMINISTRATION**

Document No.:

OT/AS/001

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page **35** of **154**

6. Each case is assigned, and the bulk action is recorded.

7. Each auditor gets a notification about their new case.

AF6. Auditor Would Be Too Busy (during step 4)**Flow:**

1. The automatic check finds that giving the case to the best-matched auditor would put them over their workload limit.
2. That auditor is skipped, and the next best match is tried instead.
3. A note is made that the top choice was skipped because of workload.
4. If all qualified auditors are already at their limit, the case follows AF1 (no suitable auditor found).

AF7. Auditor Away on Leave (during step 3 or AF2 step 3)**Flow:**

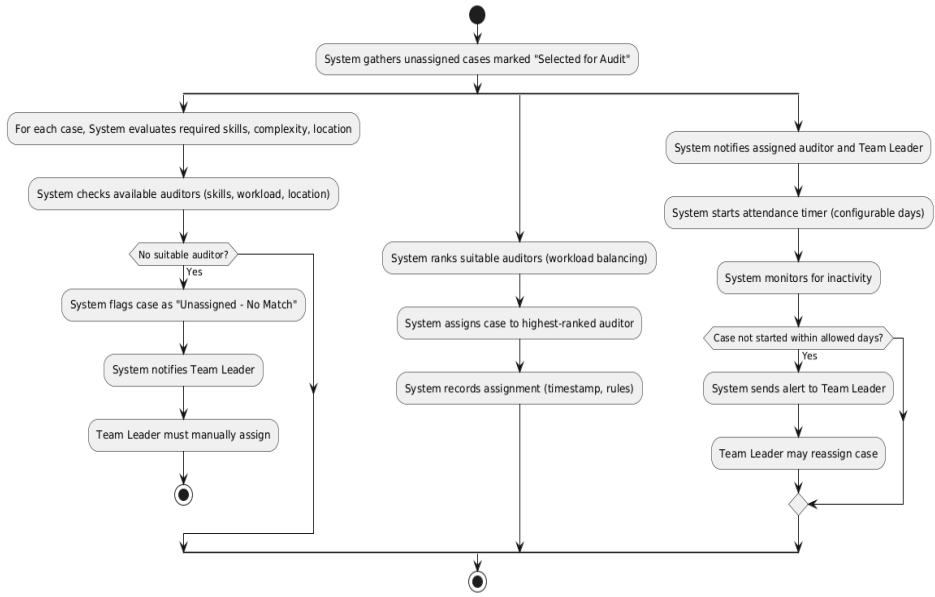

1. If leave information is available in the system, the check notices that the chosen auditor will be away during the time the case needs to be worked on.
2. The assignment is stopped, and a warning appears: "This auditor is on approved leave during the case period."
3. Other available auditors are suggested instead.
4. The person assigning can pick someone else, or go ahead with the original choice if the leave is short and they provide a reason.
5. If leave information is not available, this check does not happen, and people have to keep track manually.
6. Any decision to override a leave conflict is recorded.

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 36 of 154

Post-Condition	Cases assigned: Every selected case has been given to an auditor, either automatically or by hand. Everyone told: The auditors who got cases and the Team Leader have been informed. Timers started: Each case now has a countdown for when work should begin. Any problems flagged: Cases that could not be assigned are marked for the Team Leader to look at. Record kept: All assignments, moves, and overrides have been logged with their reasons. Workloads updated: Each auditor's workload now shows their new cases.
Business Rules	BR-001: Cases must be assigned to auditors whose skills match case needs. BR-002: Workload limits must be respected unless overridden with reason. BR-003: Case complexity should match auditor experience. BR-004: Moving a case requires a recorded reason.
Exceptions	Allocation service unavailable – system retries; after 3 attempts logs error and notifies administrator.
Information Requirements	• A report showing which cases are assigned to which auditors • A list of any cases that could not be assigned. • A report showing each auditor's current workload. • A log of any cases that were moved from one auditor to another. • A history of all alerts that were raised and what happened next

Assumptions	Auditor profiles are maintained by HR/administrators. Allocation rules are pre-configured.
Notes	Letting the system handle assignments automatically helps make sure things are fair and based on skills, not personal choice.

1.06 Plan Individual Audit Case

Attribute	Description
Use Case ID	BUC-TA-005
Use Case Name	Plan Individual Audit Case

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION		Issue No.: 3	Page No.: Page 38 of 154

Description	After a case is assigned, the auditor prepares a detailed plan. This means reviewing taxpayer information, understanding why the case was selected, deciding what to focus on, researching the industry, choosing a sampling method, and writing down the steps. The plan is sent to the team leader for approval.
Actors	• Primary: Auditor, Team Leader • Secondary: Taxpayer (only when documents are needed)
Pre-Condition	• The case is assigned and ready. • Taxpayer and risk information are available, templates are set, and the auditor has permission to proceed.
Triggers	The auditor opens the assigned case and selects "Prepare Audit Plan."

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 39 of 154

Normal Workflow

1. The auditor opens the case and reviews the taxpayer profile, selection reason, and risk information.
2. All available information is shown: filing history, payment records, previous audits, and outside data.
3. The auditor analyses the information and identifies potential risk areas.
4. When it is needed, the auditor requests documents from the taxpayer; the taxpayer can upload them.
5. The auditor reviews any uploaded documents and adds them to the analysis.
6. The auditor decides the audit's scope: what to focus on, what periods, and how much effort.
7. The auditor researches the taxpayer's industry, comparing ratios and benchmarks.
8. The auditor chooses a sampling method suitable for the case type.
9. The auditor prepares the detailed audit plan: which parts of the business, what steps for each tax type, timeline, and who does what.
10. The auditor may set personal targets based on case complexity.
11. The auditor saves and submits the plan to the Team Leader. Each save creates a new version.
12. The team leader is notified, and the case becomes "Plan Submitted."

Alternative Flow

AF1. Not Enough Information to Plan Properly (during step 3)
Flow:

1. The auditor finds that the information available is not enough to make a proper plan.
2. They write down what information is missing.
3. They request the missing information from the taxpayer (following step 4).
4. If the taxpayer does not respond within the time allowed, the auditor can either: a. Go ahead with what they have, but make a note in the plan that information was missing. b. Ask the team leader for advice on what to do.
5. The team leader may say it is okay to proceed or may put the planning on hold until more information comes.

AF2. Taxpayer Does Not Send Requested Documents (during step 5)
Flow:

1. The taxpayer does not upload the requested documents within the time they were given.
2. A reminder is sent to the taxpayer.
3. If there is still no response after the reminder, the auditor is told.
4. The auditor can then: a. Give the taxpayer more time, writing down why. b. Go ahead with the information they already have. c. Suggest that the case might need to be escalated to enforcement.
5. Whatever they decide, the reason is written down.

AF 3. Deeper Industry Research Needed (during step 7)
Flow:

Company Name:

የኢ.ንፎ.ር.ሚ.ሽ.ን መረብ ደህነት አስተዳደር

**INFORMATION NETWORK SECURITY
ADMINISTRATION**

Document No.:

OT/AS/001

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 41 of 154

1. The auditor finds that the basic industry information is not enough and they need to dig deeper.
2. They choose an option for more advanced research.
3. Additional tools become available, such as looking at trends over time, comparing to similar businesses in more detail, or bringing in economic data.
4. The auditor does this deeper research and attaches their findings to the case file.
5. They then go back to the normal planning steps.

AF4. Chosen Sampling Method Not Available (during step 8)**Flow:**

1. The auditor picks a sampling method that has not been set up in the tool.
2. A message appears saying that this method needs to be configured first.
3. Other methods that are available are suggested.
4. The auditor can either pick one of the available methods or ask for the method they want to be set up.
5. If they ask for it to be set up, they pause and come back to it later, or they use a different method.

AF5. Team Leader Sends Plan Back for Changes (after step 12)**Flow:**

1. The Team Leader reviews the submitted plan and finds things that need to be changed.
2. They send it back to the auditor with comments explaining what needs to be fixed.
3. The auditor is told, and the plan comes back marked as "Revisions Needed".

የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር

**INFORMATION NETWORK SECURITY
ADMINISTRATION**

Document No.:

OT/AS/001

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 42 of 154

4. The auditor reads the comments, makes the changes, and sends it again.
5. This may happen several times until the Team Leader is happy.

AF6. Auditor Decides an Entry Conference Is Needed (during step 9)**Flow:**

1. While preparing the plan, the auditor decides they need to meet with the taxpayer before finishing.
2. They save the plan as a draft.
3. They start the separate process for arranging an entry conference (this is handled in another use case).
4. After the conference, they come back and finish the plan.

AF7. Possible Fraud Found During Planning (during step 3 or 7)**Flow:**

1. While looking at the information, the auditor sees something that might be fraud.
2. They mark the case for fraud review.
3. The fraud investigation process is started automatically.
4. Planning for this case is put on hold until the investigation team decides what to do.
5. The auditor writes down what they found and tells the Team Leader.

AF8. Outside Information Not Available (during step 2 or 7)**Flow:**

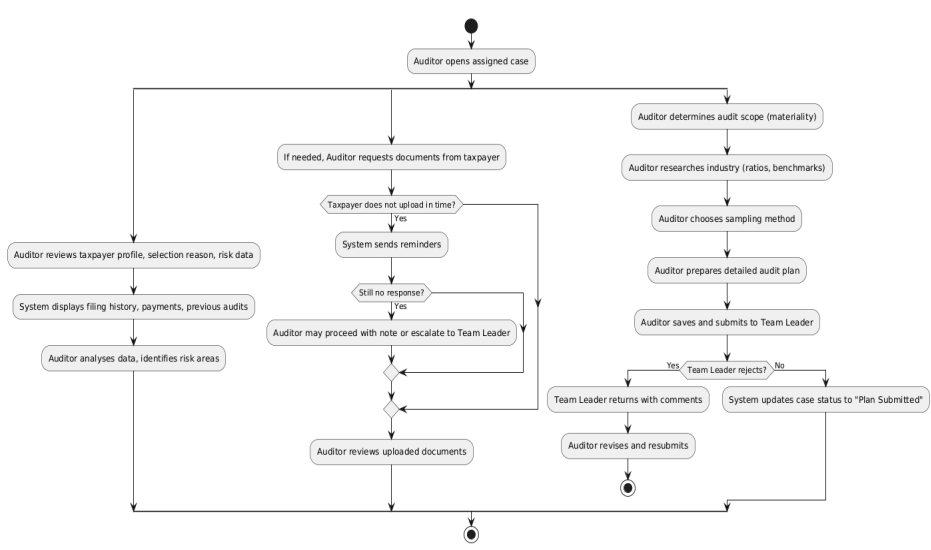

1. The auditor tries to get information from an outside source (like customs data or bank records) but it is not available or is delayed.
2. A warning appears saying the information is not available and might be old or missing.
3. The auditor can then:

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 43 of 154

	a. Go ahead with the information they do have, but make a note in the plan that something was missing. b. Put the planning on hold and set a reminder to check again later. c. Ask for the information to be pulled in by hand from another source. 4. Whatever they decide is written down. 5. If the information becomes available later, the auditor is told so they can revisit the plan.
Post-Condition	Plan ready: A detailed audit plan has been created and sent for approval (or approved straight away if that is how it is set up). Status updated: The case is now marked as "Plan Submitted". Everything recorded: All the analysis, any requests for documents, and every decision made has been saved in the case file. Sampling noted: The method chosen for sampling has been written down. Fraud check: If anything suspicious was found, the fraud team has been told and is looking into it. Audit trail: Every step taken during planning has been recorded, including who did what and when.
Business Rules	BR-001: No fieldwork until plan is approved. BR-002: Auditor must document materiality. BR-003: Sampling method must be suitable and documented. BR-004: For comprehensive audits, industry research is required.

Exceptions	Data warehouse timeout – retries; if fails, shows cached data with warning.
Information Requirements	• The completed audit plan document. • Notes on how the sampling method was chosen . • Any industry research or analysis that was done . • A record of any documents requested from the taxpayer and whether they were provided
Assumptions	Templates and risk information are pre-configured.
Notes	Good planning is the foundation of a good audit. Taking time at this stage to really understand the taxpayer and the risks saves time later and leads to better results.

1.07 Select and Form Joint Audit Team

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 45 of 154

Attribute	Description
Use Case ID	BUC-TA-006
Use Case Name	Select and Form Joint Audit Team
Description	A special committee looks at complex cases that might need a team of auditors. They decide if a joint audit makes sense, then put together a team with the right skills and pick a team leader. The case is then ready for the team to start planning.
Actors	- Primary: Joint Audit Committee - Secondary: Risk Directorate, Other Directorates, External Stakeholders (provide cases)
Pre-Condition	- Potential joint audit cases are identified. - Criteria and staff information are ready, and the Joint Audit Committee has the required permissions.
Triggers	- The committee is told that new joint audit possible cases are ready to look at. - A committee member opens the joint audit selection screen. - A case that was marked as "Joint Audit" during the regular selection process (from UC-AP-003) comes through for their attention.

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 46 of 154

Normal Workflow

1. A list appears showing cases that might need a joint audit – from the risk team or requested by others.
2. The committee filters the list by location, industry, risk level, or source(provided the case).
3. For each case, they review the details and risk information.
4. The committee decides if a joint audit is suitable based on taxpayer size, complexity, and cross-border issues.
5. For suitable cases, they do a deeper risk check using all available information.
6. The committee picks the cases that will go ahead as joint audits.
7. Each chosen case gets a unique reference number and is linked to the annual plan.
8. The committee considers what skills are needed and who is available. The tool can suggest auditors.
9. They choose the auditors for the team (manually or accepting suggestions).
10. One auditor is chosen as team leader.
11. All team members and the leader are notify about their new case.
12. The case is marked as "Joint Audit Team Assigned" and ready for planning.

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 47 of 154**Alternative Flow****AF1. Case Not Suitable for Joint Audit (during step 3)****Flow:**

1. The committee looks at a case and decides it is not right for a joint audit. It might be too simple, or the risks might not be big enough.
2. They write down why they are saying no.
3. If the case originally came from the risk team as a possible joint audit, it can be sent back to be considered as a normal, individual audit instead.
4. The decision is recorded, and anyone who asked for the audit is told the outcome.

AF2. Not Enough Auditors Available (during step 7)**Flow:**

1. The committee tries to find enough auditors with the right skills, but there are not enough free people.
2. A warning appears, showing what skills are missing.
3. The committee can then:
 - a. Put this case aside and come back to it later when people might be free.
 - b. Ask for someone to be made available, even if it means delaying other work.
 - c. Go ahead with a smaller team, but write down why they think it will still work.
4. Whatever they decide is recorded.

AF3. Urgent Joint Audit Request Arrives (at any step)**Flow:**

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

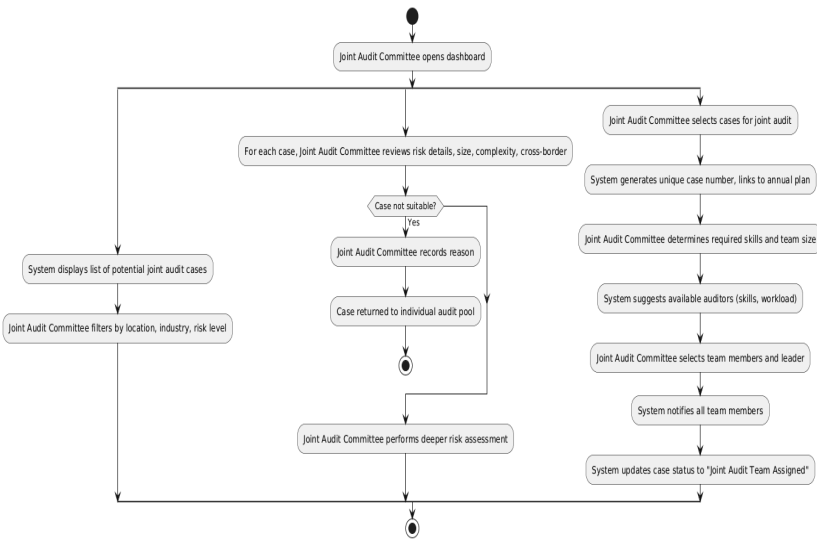

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 48 of 154

	1. While the committee is working, an urgent request comes in for a joint audit that needs fast attention. 2. A special notice appears with details of the case and a button to "Handle Now". 3. The committee can stop what they are doing and look at the urgent case straight away. 4. If they agree to take it on, it is added to the list and they work through the steps more quickly. 5. The urgent handling is noted in the records. AF4. Let the Tool Suggest the Whole Team (during step 7) Flow: 1. The committee chooses an option called "Suggest Team Automatically". 2. The tool looks at what skills the case needs and finds the best-matched available auditors, trying to keep workloads fair. 3. A suggested team appears, with a possible team leader. 4. The committee can accept the suggestion or make changes by hand. If they change anything, they write a short reason. 5. The team is then formed and told.
Post-Condition	Joint cases picked: The cases that will be done as joint audits have been chosen and given their own reference numbers. They are linked to the annual plan. Teams ready: For each case, a team of auditors has been put together, and someone has been picked to lead them.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 49 of 154

	Everyone notified: All the team members and the team leader have been notified about their new case. Record kept: Every decision that was made, any cases that were turned down, and how teams were put together has been written down.
Business Rules	BR-001: Case must meet conditions (large taxpayer, complex business, crossborder). BR-002: Joint Audit Committee must agree before any joint audit. BR-003: Committee must consider skills, workload, and location when forming team.
Exceptions	Staff data unavailable – system logs error and notifies administrator.
Information Requirements	- List of selected joint audit cases - Team details for each case
Assumptions	Staff profiles are up-to-date.

Notes	Joint audits are: ● expensive ● complex ● require many auditors So committee ensures: Only important cases use joint audit
Activity Diagram	 <pre> graph TD Start(()) --> Dashboard[Joint Audit Committee opens dashboard] Dashboard --> Review[For each case, Joint Audit Committee reviews risk details, size, complexity, cross-border] Review --> Suitable{Case not suitable?} Suitable -- Yes --> Record[Joint Audit Committee records reason] Record --> Return[Case returned to individual audit pool] Return --> Start Suitable -- No --> SelectCases[Joint Audit Committee selects cases for joint audit] SelectCases --> Generate[System generates unique case number, links to annual plan] Generate --> Determine[Joint Audit Committee determines required skills and team size] Determine --> Suggest[System suggests available auditors (skills, workload)] Suggest --> SelectTeam[Joint Audit Committee selects team members and leader] SelectTeam --> Notify[System notifies all team members] Notify --> Update[System updates case status to "Joint Audit Team Assigned"] Update --> Deeper[Joint Audit Committee performs deeper risk assessment] Deeper --> Start </pre>

1. 08 Plan Joint Audit

Attribute	Description
Use Case ID	BUC-TA-007
Use Case Name	Plan Joint Audit

	Company Name: የኢንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 51 of 154

Description	The joint audit team works together to prepare a detailed plan. They review taxpayer information, decide what to focus on, research the industry, choose sampling methods, and write down who will do what. The plan is sent to the Joint Audit Committee for approval.
Actors	• Primary: Joint Audit Team (including Team Leader), Joint Audit Committee • Secondary: Taxpayer (only when documents are needed)
Pre-Condition	• The joint audit case is ready with the team assigned. • Taxpayer and risk details are available, templates are set, and all members have access.
Triggers	The team leader opens the assigned joint audit case and selects "Prepare Joint Audit Plan."

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 52 of 154

Normal Workflow

1. The team opens the case and reviews the taxpayer profile, selection reason, and risk information together.
2. All available information is shown: filing history, payment records, previous audits, and outside data.
3. The team discusses the information and identifies risk areas. Notes are shared.
4. When needed, the team leader requests documents from the taxpayer; the taxpayer can upload them.
5. The team reviews any uploaded documents and adds them to the analysis.
6. The team agrees on the audit scope: what to focus on, what periods, and who covers which areas.
7. The team researches the industry, comparing ratios and benchmarks.
Different members may look at different aspects.
8. The team chooses a sampling method suitable for the case.
9. The team prepares the detailed plan: which parts of the business, what steps for each tax type, timeline, and who is responsible for what.
10. The team may set collective or individual targets.
11. The team leader saves and submits the plan to the Joint Audit Committee.
Each save creates a new version.
12. The committee is notified, and the case becomes "Joint Audit Plan Submitted."

Alternative Flow

AF1. Not Enough Information to Plan Properly (during step 3)

Flow:

1. The team finds insufficient information.
2. They document what is missing and request it from the taxpayer.
3. If no response within allowed time, they can proceed with a note or ask the committee.
4. The committee may approve proceeding or put planning on hold.

AF2. Taxpayer Does Not Send Requested Documents (during step 5)

Flow:

1. The taxpayer does not upload requested documents on time.
2. A reminder is sent.
3. If still no response, the team is told.
4. They can extend the deadline, proceed with what they have, or recommend escalation.
5. The decision is documented.

AF3. Deeper Industry Research Needed (during step 7)

Flow:

1. Basic industry information is not enough.
2. The team selects "Advanced Industry Analysis".
3. More tools become available.
4. They do deeper research and attach findings.
5. They return to normal planning.

AF4. Chosen Sampling Method Not Available (during step 8)

Flow:

1. The team picks a sampling method that is not set up.
2. A message explains it needs configuration.

3. Available methods are suggested.
4. They can pick an available method or request configuration.
5. If requested, they pause and resume later.

AF5. Committee Sends Plan Back for Changes (after step 12)**Flow:**

1. The committee reviews the plan and requests changes.
2. The plan is returned with comments, marked "Revisions Needed."
3. The team revises and resubmits.
4. This may repeat until approved.

AF7. Possible Fraud Found During Planning (during step 3 or 7)**Flow:**

1. The team sees something that might be fraud.
2. They mark the case for fraud review.
3. The fraud investigation process starts automatically.
4. Planning is put on hold.
5. They document findings and tell the committee.

AF8. Outside Information Not Available (during step 2 or 7)**Flow:**

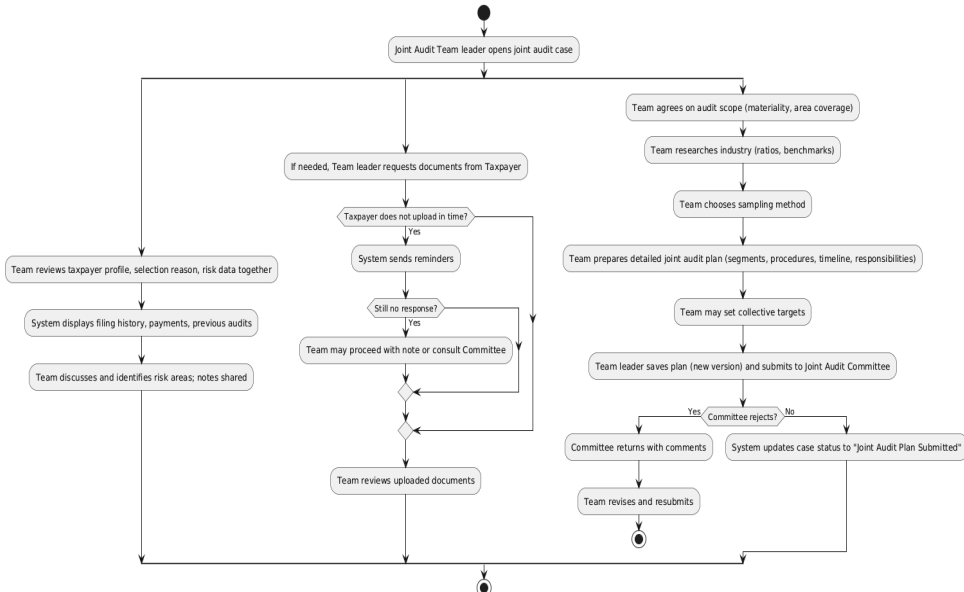

1. Required outside information is unavailable or delayed.
2. A warning appears.
3. The team can proceed with a note, delay planning, or request a manual data pull.
4. The decision is documented.
5. If data becomes available later, they are notified.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 55 of 154

Post-Condition	Plan ready: A detailed joint audit plan has been created and sent to the committee for approval. Status updated: The case is now marked as "Joint Audit Plan Submitted." Everything recorded: All the analysis, any requests for documents, and every decision made have been saved in the case file. Sampling noted: The method chosen for sampling has been written down. Fraud check: If anything suspicious was found, the fraud team has been told and is looking into it. Audit trail: Every step taken during planning has been recorded, including who did what and when. Different versions of the plan show how it developed.
Business Rules	BR-001: No joint audit fieldwork until plan approved by Joint Audit Committee. BR-002: Team must document materiality. BR-003: Sampling method must be suitable and documented.
Exceptions	Collaborative workspace unavailable – system logs error and alerts administrator.
Information Requirements	• The completed joint audit plan document. Notes on how the sampling method was chosen . • Any industry research or analysis that was done. • A record of any documents requested from the taxpayer and whether they were provided. The approval record showing when the committee signed off . • A history of different versions of the plan

Assumptions	All team members have access to the shared workspace.
Notes	Planning a joint audit is similar to planning an individual one, but with the added complexity of a team working together.
Activity Diagram	 <pre> graph TD Start(()) --> OpenCase[joint Audit Team leader opens joint audit case] OpenCase --> AgreeScope[Team agrees on audit scope materiality area coverage] AgreeScope --> Research[Team researches industry ratios benchmarks] Research --> ChooseMethod[Team chooses sampling method] ChooseMethod --> PreparePlan[Team prepares detailed joint audit plan segments procedures timeline responsibilities] PreparePlan --> SetTargets[Team may set collective targets] SetTargets --> SubmitPlan[Team leader saves plan new version and submits to joint Audit Committee] SubmitPlan --> CommitteeRejects{Committee rejects?} CommitteeRejects -- Yes --> ReturnComments[Committee returns with comments] ReturnComments --> Revise[Team revises and resubmits] Revise --> SubmitPlan CommitteeRejects -- No --> UpdateStatus[System updates case status to joint Audit Plan Submitted] UpdateStatus --> End(()) OpenCase --> RequestDocs[If needed Team leader requests documents from Taxpayer] RequestDocs --> UploadTime{Taxpayer does not upload in time?} UploadTime -- Yes --> SendReminders[System sends reminders] SendReminders --> NoResponse{Still no response?} NoResponse -- Yes --> ConsultCommittee[Team may proceed with note or consult Committee] ConsultCommittee --> ReviewDocs[Team reviews uploaded documents] ReviewDocs --> End UploadTime -- No --> ReviewProfile[Team reviews taxpayer profile selection reason risk data together] ReviewProfile --> DisplayHistory[System displays filing history payments previous audits] DisplayHistory --> DiscussRisk[Team discusses and identifies risk areas notes shared] DiscussRisk --> End </pre>

1.09 Manage Audit Case Progress

Attribute	Description
Use Case ID	BUC-TA-008
Use Case Name	Manage Audit Case Progress

	Company Name: የኢ.ንፎ.ር.ሚ.ሽን መረብ ደህነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 57 of 154

Description	During the audit, the auditor records their daily work. This tracks progress against the plan. Team leaders can see how all cases are progressing. Regular reports are produced. If warning signs appear, the case may be sent to the investigation team.
Actors	• Primary: Auditor, Team Leader • Secondary: Investigation Team (when cases are sent)
Pre-Condition	• The audit case is created, assigned, and now in progress.
Triggers	The auditor opens the case and selects "Record Daily Work". The tool may also remind the auditor at the end of each day to record what they did.
Normal Workflow	1. The auditor opens the case and goes to the daily record section. 2. They enter the time spent, tasks done, and any important findings. 3. They can attach documents or evidence from that day's work. 4. They save the entry; the case progress is updated against the plan. 5. The team leader can view a screen showing all their cases and whether each is on track. 6. The tool watches for warning signs, such as no work recorded for a while or suspicious patterns. 7. If warning signs meet certain rules, the case is automatically sent to the investigation team. The team leader is told. 8. At the end of each week and month, reports are produced showing overall progress, completed cases, and auditor productivity.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 58 of 154

Alternative Flow	AF1. Auditor Forgets to Record Work (during step 1) Flow: 1. The auditor does not record work for several days. 2. The tool sends a reminder. 3. If still nothing, the team leader may be told. AF2. Warning Signs Trigger Investigation (during step 7) Flow: 1. The tool spots something matching investigation rules. 2. The case is flagged for the team leader to review first. 3. The team leader can agree to send it, stop it with a reason, or do nothing (after which it sends automatically). 4. If sent, the investigation team takes over and the auditor is told. AF3. Team Leader Adds Comments (during step 5) Flow: 1. The team leader sees something they want to ask about. 2. They add a comment or question to the case. 3. The auditor sees it next time they open the case and can reply. 4. The conversation becomes part of the case record.
Post-Condition	Work recorded: Every day's work has been written down and attached to the case. Progress tracked: The case now shows how far along it is compared to the original plan. Reports available: Weekly and monthly reports have been produced, showing how things are going overall.

ADMINISTRATION**

Document No.:

OT/AS/001

Title

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page **59** of **154**

	Investigation started: If any warning signs were serious enough, the case has been sent to the Investigation Team and they are now looking at it. Audit trail: Every entry, every comment, and every decision has been recorded.
Business Rules	BR-001: Auditors must record work each day (frequency configurable). BR-002: Progress measured against planned completion dates. BR-003: Team leaders must see progress of all their cases. BR-004: Regular reports (weekly, monthly) must be produced. BR-005: Certain warning signs trigger investigation (rules configurable).
Exceptions	Reporting database lag – dashboard shows cached data with warning.
Information Requirements	• Daily work logs for each case. • Weekly and monthly progress reports. • Productivity reports showing work done by each auditor. • A log of any cases that were sent to investigation, and why
Assumptions	Planned start/end dates are set for all active cases. Estimated effort is stored and accurate.
Notes	Keeping a good record of daily work is important for several reasons. It helps track progress, it shows how much effort different types of audits take and it provides evidence of what was done if questions come up later.

1.13 Initiate Transfer Pricing Audit Case

Attribute	Description
Use case ID	BUC-TA-012

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 82 of 154

Use case Name	Initiate Transfer Pricing Audit Case
Description	This use case describes how the tax authority identifies taxpayers with potential transfer pricing risks and initiates a formal transfer pricing audit case. Cases originate from general risk-based audit selection or stakeholder referrals and are evaluated, validated, and approved before proceeding to audit planning.
Actors	• Primary Actors: Transfer Pricing Proces Owner, Review Committee, Stakeholders (Risk Directorate, Customs, Investigation Unit) • Secondary Actors: Transfer Pricing Audit Team, Stakeholders (Risk Directorate, Customs, Investigation Unit)
Precondition	A case is identified through general risk-based audit selection • Taxpayer data exists in the tax administration database • Risk indicators for transfer pricing are defined • Authorized audit staff are available
Trigger	Identification of a taxpayer with potential transfer pricing risk or submission of a referral for transfer pricing review.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 83 of 154

Normal Workflows	1. The transfer pricing audit team reviews cases identified through general audit case selection. 2. The team applies transfer pricing risk indicators to determine relevance. 3. Stakeholder referrals are received and considered where applicable. 4. The transfer pricing process owner evaluates the strength of identified risks or referrals. 5. A transfer pricing audit case is initiated for qualified taxpayers. 6. The case is assigned to the responsible transfer pricing audit team. 7. The audit team performs an initial risk assessment using available information. 8. The transfer pricing process owner defines initial hypotheses, scope, and potential revenue at risk. 9. The case is presented to the review committee during a planning meeting. 10. The review committee evaluates the case and decides whether to proceed with a full audit. 11. If approved, the case proceeds to the audit planning stage.

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page 84 of 154**Alternative Flow****AF1. Stakeholder Referral Case**

Trigger: A stakeholder submits a request for a possible transfer pricing audit case(**during Normal Flow Step 3**).

Flow:

1. The stakeholder submits a referral describing the suspected transfer pricing risk.
2. The transfer pricing process owner reviews the referral.
3. The audit team evaluates supporting information.
4. If the referral is valid, a transfer pricing audit case is initiated.
5. The process continues from Step 4 of the Normal Workflow.

AF2. Weak Referral Case

Trigger: The referral lacks sufficient supporting evidence(**during Normal Flow Step 4**).

Flow:

1. The process owner reviews the referral details.
2. The referral is assessed as weak or unsupported.
3. The audit team collects additional information or supporting evidence.
4. If evidence remains insufficient, the case is postponed or closed.
5. If additional evidence is obtained, the process resumes from Step 5 of the Normal Workflow.

AF3. Duplicate Case Identified

Trigger: The taxpayer is already under a transfer pricing audit(**during Normal Flow Step 5**).

Flow:

1. The audit team identifies an existing active transfer pricing audit case for the taxpayer.

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 85 of 154

	2. The team reviews whether the cases relate to the same transactions. 3. If related, the cases are merged into the existing audit case. 4. If unrelated, a separate audit case may be initiated.
Postcondition	Success: A transfer pricing audit case is created and approved for audit planning. Cancelled: Case is rejected due to insufficient evidence or duplication.
Exceptions:	- The system fails to allocate the case to a suitable audit team. The Process Owner must then manually select a team and document the reason. - Required taxpayer data is missing or incomplete; the case is held, and the audit team is notified until the information becomes available.
Business Rules	BR-001: Every transfer pricing audit case must have a unique case identifier. BR-002: A case must be supported by at least one risk indicator or stakeholder referral. BR-003: Transfer pricing audit cases must be reviewed by the process owner before proceeding to planning.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 86 of 154

Information Requirements	• Risk assessment reports. • Stakeholder referral forms. • Taxpayer financial summaries. • Preliminary transfer pricing risk indicators. • Approval records and justifications for decisions. • Team workload and expertise data for allocation.
Assumptions	• Case allocation rules are correctly configured and up-to-date. • All actors have access to the necessary case information to make informed decisions. • Risk-based selection criteria (revenue at risk, cross-border transactions, industry benchmarks) are predefined.
Notes & Issues	• Referrals can come from internal audits, customs, or external stakeholders. • Risk-based selection criteria may include revenue at risk, cross-border transactions, and industry benchmarks. • Initial hypotheses are high-level and will be refined in audit planning.

Workflows**

1. The transfer pricing audit team reviews the approved audit case and available taxpayer information.
2. The audit team researches and determines the materiality level, including the audit objectives, scope, context, and resources required.
3. The audit team conducts research on the taxpayer's industry, including common business practices, pricing structures, and industry risk indicators.
4. The audit team determines and documents the audit sampling method to be used for examining taxpayer records and transactions.
5. The transfer pricing process owner provides guidance to the audit team on the scope and priorities of the audit planning process.
6. The transfer pricing audit team prepares a detailed audit plan and audit program, including the audit scope, timeline, resources, and key activities.
7. The audit team submits the prepared audit plan to the transfer pricing process owner for review and approval.
8. The transfer pricing process owner reviews the results of the audit preparation, including the materiality assessment, industry research, sampling approach, and proposed audit plan.
9. If the plan is satisfactory, the process owner approves the audit plan.
10. If required, an entry conference with the taxpayer is scheduled to formally begin the audit engagement.

3

Page No.:

Page 90 of 154**Alternative Flow****AF1. Audit Plan Requires Revision**

Trigger: The audit plan is incomplete or does not adequately address the identified risks(during Normal Flow Step 8).

Flow:

1. The transfer pricing process owner reviews the audit plan.
2. The process owner identifies gaps or weaknesses in the proposed plan.
3. The audit team revises the audit plan to address the identified issues.
4. The revised plan is resubmitted for approval.
5. The process resumes from Step 8 of the Normal Workflow.

AF2. Additional Industry Research Required

Trigger: Industry information collected during planning is insufficient(during Normal Flow Step 6).

Flow:

1. The audit team identifies gaps in the industry analysis.
2. The audit team collects additional information from industry reports, government databases, or market studies.
3. The audit team updates the audit plan based on the additional industry information.
4. The process resumes from Step 7 of the Normal Workflow.

AF3: New Risk Identified During Planning**Trigger:**

Additional transfer pricing risks are identified (during Normal Workflow Step 2 or Step 3).

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 91 of 154

	Flow: 1. The audit team identifies new risk indicators not captured in the initial case. 2. The risks are documented with justification. 3. The audit scope and objectives are updated to include the new risks. 4. The audit plan is revised accordingly. 5. The updated plan is submitted for review. 6. The process resumes from Normal Workflow Step 7 (Submit plan for approval).
Postcondition	Success: A comprehensive transfer pricing audit plan is approved and the audit proceeds to execution Cancelled: The audit plan is rejected and requires reassessment
Exceptions:	• Required taxpayer data or transfer pricing documentation is unavailable; the audit team requests the information from the taxpayer or internal sources, and planning is held until the information is received. • The system fails to retrieve industry research data; the audit team must manually source alternative data and document the source.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001

1.15 Conduct Transfer Pricing Audit Fieldwork

Attribute	Description
Use case ID	BUC-TA-014
Use case Name	Conduct Transfer Pricing Audit Fieldwork
Description	This use case describes how the transfer pricing audit team performs audit fieldwork to examine the taxpayer's financial records and related-party transactions. The team reviews accounting systems, verifies transaction records, examines supporting documents, and collects relevant financial and pricing information to support transfer pricing analysis.
Actors	• Primary Actors: Transfer Pricing Audit Team. • Secondary Actors : Taxpayer / Taxpayer Representative, Transfer Pricing Process Owner
Precondition	• The transfer pricing audit plan has been approved • The audit team has access to taxpayer records and documentation
Trigger	Approval of the audit plan and commencement of fieldwork.

BUSINESS REQUIREMENT SPECIFICATION

Issue No.

3

Page No.:

Page **96** of **154****Normal
Workflows**

1. The transfer pricing audit team begins audit fieldwork according to the approved audit plan.
2. The audit team reviews the taxpayer's accounting and financial reporting system to understand how related-party transactions are recorded and reported.
3. The audit team identifies transactions between the taxpayer and related foreign entities that may be subject to transfer pricing examination.
4. The audit team traces transaction flows and conducts an audit trail of transactions using available records such as e-invoicing data, cash register machine records, or the taxpayer's internal accounting system.
5. The audit team examines supporting documents such as invoices, contracts, shipping documents, and payment records.
6. The audit team selects a representative sample of transactions for detailed examination based on the approved audit sampling method.
7. The audit team verifies the selected transactions against supporting documentation and accounting records.
8. The audit team reviews financial records related to the selected transactions to understand the transaction structure, pricing arrangements, and supporting cost information.
9. The audit team gathers relevant financial and pricing information required for transfer pricing analysis.
10. Where additional information or clarification is required, the audit team obtains approval from the transfer pricing process owner to request further information from the taxpayer.

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 97 of 154

	11. The audit team issues requests for additional information or documents to support factual development of the audit. 12. The taxpayer provides the requested information or evidence, including documents, explanations, or access to records. 13. The audit team may conduct interviews, plant tours, or site visits to better understand the taxpayer’s business operations and transaction processes. 14. The audit team reviews the information obtained and incorporates it into the audit working papers. 15. The audit team identifies transactions that may require detailed transfer pricing analysis. 16. The audit team documents observations and organizes the collected information for the transfer pricing analysis stage. 17. The transfer pricing process owner reviews the fieldwork progress and confirms that sufficient evidence has been collected for transfer pricing analysis.
Alternative Flow	AF1. No Transfer Pricing Risk Identified Trigger: The audit examination does not reveal significant transfer pricing risk. Flow: 1. The audit team documents the findings. 2. The team concludes that transfer pricing risk is minimal. 3. The audit proceeds to reporting with no adjustment recommendations.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 98 of 154

Postcondition	Success: Audit fieldwork is completed and sufficient evidence is collected to perform transfer pricing analysis. Cancelled: Audit fieldwork is suspended due to insufficient records or inability to verify transactions.
Exceptions:	• The taxpayer denies access to premises for on-site verification; the audit team escalates to the Process Owner for legal enforcement or alternative procedures. • The system fails to retrieve e-invoicing or electronic records; the audit team requests manual records from the taxpayer and documents the system failure. • Key personnel or records are unavailable during scheduled site visits; the visit is rescheduled, and fieldwork is delayed accordingly.
Business Rules	BR-001: Transfer pricing audits must examine transactions between related entities. BR-002: Audit sampling methods must follow established audit standards. BR-003: Industry benchmarks must be used when evaluating pricing practices. BR-004: Cross-border related-party transactions must receive special scrutiny.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 99 of 154

Information Requirements:	• Taxpayer accounting records and general ledger. • Sales and purchase transaction listings. • Contracts and agreements with related parties. • Invoices, payment records, and supporting transaction documents. • Import/export and customs documentation. • Source documents used to verify transactions. • Fieldwork evidence (interview notes, site visit records, audit trail records). • Information request forms and taxpayer responses. • Working papers documenting all audit procedures performed.
Assumptions:	• The taxpayer will cooperate and provide access to records and personnel as required by law. • The audit team has the necessary skills to evaluate accounting systems and transaction records. • Sampling methods and materiality thresholds are predefined and applied consistently. • The Transfer Pricing Process Owner is available to review progress and approve additional requests.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 100 of 154

Notes & Issues	Transfer pricing risks often arise in cross-border related-party transactions • Fieldwork focuses on identifying transactions that may shift profits • Benchmarking data collected will support later analysis • Sampling enables efficient review of large datasets • Fieldwork results form the basis for transfer pricing analysis

1.16 Perform Transfer Pricing Analysis

Attribute	Description
Use case ID	BUC-TA-015
Use case Name	Perform transfer pricing analysis
Description	This use case describes how the transfer pricing audit team performs detailed transfer pricing analysis using information collected during fieldwork. The team evaluates related-party transactions, selects appropriate transfer pricing methods, identifies comparable market data, and determines whether transactions comply with the arm's-length principle.
Actors	• Primary Actors : Transfer Pricing Audit Team • Secondary Actors : Taxpayer / Taxpayer Representative, Transfer Pricing Process Owner
Precondition	• Transfer pricing audit fieldwork has been completed • Relevant financial records, transaction data, and comparable market information are available
Trigger	Completion of fieldwork and identification of transactions requiring transfer pricing analysis

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 103 of 154

Normal Workflows	1. The transfer pricing audit team reviews the transaction data and documentation collected during audit fieldwork. 2. The audit team identifies related-party transactions, particularly cross-border transactions, that require transfer pricing analysis. 3. The audit team evaluates the nature of the transactions, such as transactions involving goods, services, financing arrangements, or transfers of intangible property. 4. The audit team reviews comparative financial ratio analysis, including input/output ratios, profitability ratios, and cost or expense ratios, and compares these ratios with similar tax types and industry benchmarks. 5. The audit team defines parameters for detailed analysis of cost and expense categories and reviews the selected cost and expense types identified for further audit examination. 6. The audit team compares the taxpayer's financial performance and transaction characteristics with relevant industry benchmarks and similar tax types to identify potential irregularities. 7. The audit team assesses whether cross-border related-party transactions present potential transfer pricing risks or indicators of profit shifting. 8. The audit team selects appropriate transfer pricing methods such as the Comparable Uncontrolled Price (CUP), Transactional Net Margin Method (TNMM), cost-plus, or resale price method based on transaction characteristics. 9. The audit team searches for comparable transactions or comparable companies using industry benchmarking studies, international market databases, and other relevant sources.
-----------------------------	--

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 104 of 154

	10. The audit team determines the arm's-length price or profit range using the selected comparables and the chosen transfer pricing method.
Alternative Flow	AF1. Insufficient Comparable Market Data Trigger: Suitable comparable transactions or companies are not readily available(during Normal Flow Step 9) Flow 1. The audit team expands the search for comparable data using international databases or additional industry sources. 2. The team considers alternative transfer pricing methods that better suit the available information. 3. The transfer pricing analysis continues from (Normal Flow Step 10). AF2. Taxpayer Provides Additional Evidence Trigger: The taxpayer provides additional transfer pricing documentation or explanations(Normal Flow Step 6 or 7) Flow 1. The taxpayer provides additional transfer pricing documentation, explanations, or supporting evidence. 2. The audit team reviews and validates the submitted information. 3. The audit team reassesses financial ratios, comparability, and risk indicators using the new data. 4. The transfer pricing conclusions are updated where necessary. 5. The analysis resumes from Normal Flow Step 8 A3. Transactions Found to be Arm's Length

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 105 of 154

	Trigger: The taxpayer's prices fall within the acceptable arm's-length range(During normal flow step 10). Flow 1. The audit team records that the transactions comply with transfer pricing rules. 2. The audit team documents the supporting analysis. 3. The audit proceeds to reporting without adjustment.
Postcondition	Success The transfer pricing analysis is completed, and a conclusion is reached regarding whether the taxpayer's transactions comply with the arm's-length principle. Cancelled Transfer pricing analysis cannot be completed due to insufficient information or unresolved issues.
Exceptions:	• The system fails to connect to external pricing or benchmarking databases; the audit team must manually source comparable data and document the source and search methodology. • Required industry benchmarking studies are unavailable; the audit team uses alternative data sources and documents the limitations in the analysis working papers. • The taxpayer fails to provide requested additional evidence within the specified timeframe; the audit team proceeds with the available information and documents the absence of taxpayer cooperation.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 106 of 154

Business Rules	BR-001: Analysis must follow applicable transfer pricing regulations BR-002: The most appropriate method must be selected BR-003: Arm's-length determination must be supported by comparable data.
Information Requirements:	• Transfer pricing documentation (taxpayer-prepared). • Financial statements and transaction records. • Comparable company or transaction data. • Industry benchmarking studies. • External market price data. • Transfer pricing method selection rationale. • Arm's-length range calculations. • Analysis working papers and conclusions. • Approval records and justifications for decisions.
Assumptions:	• The audit team has the technical expertise to select and apply appropriate transfer pricing methods. • External benchmarking databases are reliable and up-to-date. • The Transfer Pricing Process Owner has sufficient knowledge to evaluate complex transfer pricing analyses. • Industry benchmarks and comparable data are available for the taxpayer's industry and region.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 107 of 154

Notes & Issues	• Transfer pricing analysis ensures transactions are priced as between independent parties • The arm's-length principle is the core standard • Different transactions require different methods • Comparable data is essential for accurate evaluation • Analysis results form the basis for audit adjustments and reporting

Use case ID	BUC-TA-016
Use case Name	Prepare and review the transfer pricing audit report.
Description	This use case describes how the transfer pricing audit team prepares the audit report based on audit findings and transfer pricing analysis. The report summarizes audit procedures, findings, and conclusions regarding compliance with transfer pricing regulations. The audit team discusses the findings with the taxpayer and submits the report for internal review and approval. The finalized audit report is sent to the taxpayer for signoff where applicable before proceeding to audit notice issuance.
Actors	Primary Actors: Transfer Pricing Audit Team, Transfer Pricing Process Owner Secondary Actors: Audit Team Leader, Taxpayer / Taxpayer Representative
Precondition	• Transfer pricing analysis has been completed • Audit evidence and supporting documentation are available
Trigger	Completion of transfer pricing analysis and identification of audit conclusions

154****Normal
Workflows**

1. The audit team reviews transfer pricing analysis results and audit fieldwork documentation.
2. The audit team prepares a draft fact statement summarizing findings and supporting evidence.
3. The audit team notifies the taxpayer of the draft fact statement for review.
4. The taxpayer reviews the fact statement and submits explanations or additional supporting evidence.
5. The audit team evaluates taxpayer submissions and incorporates valid clarifications.
6. The audit team prepares discussion points and supporting documents for the exit conference.
7. The audit team conducts the exit conference with the taxpayer to discuss audit findings and preliminary conclusions.
8. Based on the discussion, the audit team drafts the audit report
9. The audit team submits the draft report to the transfer pricing process owner for review and approval.
10. The process owner reviews audit preparation results and the draft report to ensure completeness and accuracy.
11. If needed, the audit team revises the report to reflect additional evidence or clarifications.
12. The transfer pricing process owner sends the audit report to the taxpayer for review and signoff within the approved period.
13. The taxpayer / representative reviews the audit report and response within the allowed period.

	14. Transfer Pricing Process Owner records the taxpayer's response in the system. 15. The audit report is finalized for submission to the audit team leader, ensuring proper version control and documentation
Alternative Flow	AF1. Taxpayer Disagrees with Audit Findings Trigger: The taxpayer disputes the conclusions presented during the exit conference (during Normal Flow Step 7). Flow 1. The taxpayer presents objections, explanations, or additional supporting documentation. 2. The audit team reviews and evaluates the submitted information. 3. The audit team reassesses the transfer pricing analysis where necessary. 4. If the new evidence is valid, the audit findings and conclusions are revised. 5. The audit report is updated accordingly. 6. The process resumes from Normal Flow Step 8 AF2. Additional Evidence Required Trigger: The audit team determines that further verification is required(during Normal Flow Step 1, 5, or 10) Flow 1. The audit team collects additional documentation or clarification. 2. The audit team reviews the new evidence. 3. The audit report is updated accordingly. 4. The process continues from Step 10 of the Normal Workflow.

	triggered.
Postcondition	Success: A complete transfer pricing audit report has been prepared, reviewed, approved, and signed or formally recorded as unsigned. Cancelled: The audit report requires significant revision or additional investigation before approval.
Exceptions:	• The taxpayer denies receipt of the draft fact statement or audit report; the audit team sends via alternative method (registered mail, secure electronic portal) and records proof of delivery. • The system fails to maintain version control; the audit team manually tracks versions and documents all changes until system functionality is restored. • Key audit team members are unavailable during the exit conference; the conference is rescheduled, and the taxpayer is notified.
Business Rules	BR-001:: Every transfer pricing audit must result in a documented audit report BR-002: Audit findings must be supported by evidence and analysis BR-003: The taxpayer must be given the opportunity to review finding BR-004:The final audit report must be sent to the taxpayer for signoff before notice issuance
Information Requirements:	• Finalized transfer pricing analysis results. • Audit fieldwork documentation and evidence.

	• Taxpayer responses and supporting evidence. • Draft fact statement. • Exit conference discussion points and minutes. • Draft and revised audit report versions. • Taxpayer signoff or objection documentation. • Approval records and justifications for decisions. • Escalation records for fraud or non-response cases.
Assumptions:	• The taxpayer will act in good faith and respond within the allowed period. • The Transfer Pricing Audit Team has the necessary skills to prepare clear and defensible audit reports. • The Transfer Pricing Process Owner has the expertise to evaluate audit reports for completeness and accuracy. • The taxpayer has access to the audit report and sufficient time to review and respond.
Notes & Issues	• The audit report consolidates fieldwork evidence and analytical conclusions. • The exit conference ensures transparency and taxpayer engagement. • The finalized report serves as the basis for audit communication and assessment

1.18 Issue Audit Notices and Manage Audit Communication

Attribute	Description
Use case ID	BUC-TA-017
Use case Name	Issue Audit Notices and Manage Audit Communication
Description	This use case describes how tax authorities formally notify taxpayers about transfer pricing audit activities and communicate the outcome of the audit. The system generates audit notices using approved formats, manages communication records, and tracks responses and delivery status of notices.
Actors	• Primary Actor : Transfer Pricing Audit Team • Secondary Actors: Transfer Pricing Process Owner, Taxpayer / Taxpayer Representative, MoR Administrative Staff
Precondition	• The transfer pricing audit report has been reviewed and approved • Audit activities require formal communication with the taxpayer
Trigger	Completion of audit report finalization and requirement to formally notify the taxpayer through audit notice issuance.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 117 of 154

Normal Workflows	1. The transfer pricing audit team prepares an audit notice using approved formats and includes relevant taxpayer details. 2. The transfer pricing audit team ensures a unique reference number is assigned to the notice for tracking. 3. The transfer pricing process owner reviews and approves the audit notice. 4. The transfer pricing audit team sends the approved notice to the taxpayer through appropriate communication channels and ensures the taxpayer is notified. 5. Administrative staff prints notices individually or in bulk when physical delivery is required and arranges dispatch. 6. The transfer pricing audit team records the issued notice in the taxpayer's audit file and updates communication history (date, status, responsible outcome). 7. The Transfer Pricing Audit Team maintains a list of taxpayers under audit and tracks all issued notices.
-------------------------	---

	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 118 of 154

Alternative Flow	AF1. Undelivered Notice Trigger: The notice is returned as undelivered(During Normal flow step 4). Flow 1. Administrative staff record the undelivered notice. 2. An action plan is prepared to contact the taxpayer through alternative means. 3. The responsible team attempts to re-establish communication with the taxpayer. AF2. Email Communication Requested Trigger: The taxpayer has requested electronic communication(During Normal flow step 4) Flow 1. The audit team verifies the taxpayer's preferred communication channel. 2. The notice is sent via secure electronic communication (email or portal). 3. Delivery confirmation (read receipt or system acknowledgment) is captured. 4. The communication is recorded in the audit communication log. 5. The process continues to Normal Flow Step 6 (Record notice and update history).
-------------------------	--

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 119 of 154

Postcondition	Success Audit notices and communications are delivered and recorded in the audit history. Cancelled: Communication with the taxpayer cannot be established and requires further administrative action.
Exceptions:	• The system fails to generate the notice within performance thresholds; the audit team manually generates the notice using templates and records the system issue for IT resolution. • The secure electronic communication channel is unavailable; the audit team uses an alternative approved channel (physical delivery, registered mail) and documents the reason. • The taxpayer's contact information is outdated or incorrect; the audit team searches internal systems or external sources for updated information before attempting delivery.
Business Rules	BR-001: All audit notices must follow approved MoR formats. BR-002: Audit notices must be issued within a configurable period
Information Requirements:	• Approved audit notice templates (various types: commencement, information request, preliminary findings, final assessment, etc.). • Taxpayer contact information (address, email, phone, authorized

	representative details). • Issued audit notices and reference records. • Delivery confirmation and tracking information. • Taxpayer responses and clarification requests. • Communication history log (date, type, status, responsible officer, outcome). • List of taxpayers under audit with notice tracking status.
Assumptions:	• Approved notice templates are maintained and up-to-date in the system. • The taxpayer's contact information is accurate and current in the tax administration database. • The Transfer Pricing Process Owner is available to review and approve notices in a timely manner. • Electronic communication channels are secure and provide delivery confirmation.
Notes & Issues	• Timely communication is critical for taxpayer compliance and response handling. • Audit notices may include: audit commencement notices, information requests, preliminary findings, final assessment notices, and extension letters. • Physical delivery may be required for legal validity in certain jurisdictions or for specific notice types. • All communications should be conducted in the taxpayer's preferred

**INFORMATION NETWORK SECURITY
ADMINISTRATION**

language where feasible.

- This use case ensures that taxpayer rights to notice and response are respected throughout the audit process.

1.19 Issue Assessment Notice and Conclude Transfer Pricing Audit

Attribute	Description
Use case ID	BUC-TA-018
Use case Name	Issue Assessment Notice and Conclude Transfer Pricing Audit
Description	This use case describes how the tax authority issues the official assessment notice to the taxpayer, allows acceptance or objection within a defined period, and concludes the transfer pricing audit. It also supports escalation to investigation and generation of management reports.
Actors	● Primary Actors : Transfer Pricing Audit Process Owner, Authorized Tax Official ● Secondary Actors : Taxpayer / Tax Agent, Audit Staff and Analysts
Precondition	The transfer pricing audit report has been finalized and approved. The audit report has been signed by the taxpayer.
Trigger	Approval of the final transfer pricing audit report

Workflow**

1. The authorized tax official prepares the assessment notice based on approved audit findings, including principal, penalties, and interest.
2. The assessment notice is reviewed and approved before issuance.
3. The approved assessment notice is issued to the taxpayer or tax agent through appropriate channels.
4. The taxpayer or tax agent receives and reviews the notice.
5. The taxpayer confirms receipt via acknowledgment or signature.
6. The taxpayer submits a response within the defined period.
7. The process owner records the taxpayer's response in the audit file, including date, status, and outcome.
8. The audit case proceeds based on the taxpayer's response.
9. Audit staff and analysts use audit tools to analyze records, link e-invoicing systems and third-party data, and access remote ledgers where applicable.
10. Audit staff generate management reports, including assessment amounts, penalties, appeals, audit yield, productivity, and other key performance indicators.
11. The audit case is finalized and closed based on the outcome of the assessment and reporting.

3

Page No.:

**Page 124 of
154****Alternative Flow****AF1: Taxpayer Accepts Assessment**

Trigger:

The taxpayer accepts the assessment (during Normal Workflow Step 6: Taxpayer response).

Flow:

1. The taxpayer reviews the assessment notice and formally accepts the findings.
2. Acceptance is recorded in the audit system.
3. The audit completion process is initiated.
4. Any required payment or compliance steps are triggered.
5. The audit case is finalized and closed successfully.
6. The process continues to Normal Workflow Step 10 (Case finalization and closure).

AF2: Taxpayer Raises Objection

Trigger:

The taxpayer disagrees with the assessment (during Normal Workflow Step 6).

Flow:

1. The taxpayer submits a formal objection within the legally defined timeframe.
2. The objection is recorded in the audit system.
3. Supporting documentation is reviewed for completeness.

	4. The case is forwarded to the objection/appeal process according to tax procedures. 5. The process continues from Normal Workflow Step 8 (Proceed based on response). AF3: No Response from Taxpayer Trigger: No response is received within the defined period (after Normal Workflow Step 6). Flow: 1. The system detects that the response deadline has passed. 2. The lack of response is recorded in the audit file. 3. The assessment is treated as enforceable according to tax regulations (e.g., deemed acceptance or default). 4. The case may be escalated to enforcement or investigation units if required. 5. The audit proceeds to Normal Workflow Step 10 (Finalization and closure). AF4: Potential Fraud Identified Trigger: Fraud indicators are identified (during Normal Workflow Step 8 or Step 9: Case progression or analysis).
--	--

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 126 of 154

	Flow: 1. The Transfer Pricing Process Owner documents suspected fraud indicators. 2. Supporting evidence is compiled and recorded. 3. The case is referred to the tax intelligence and fraud investigation unit. 4. The Tax Fraud Investigation process is initiated. 5. The audit process may be suspended or continued in parallel depending on severity.
Postcondition	Success: Assessment notice issued, taxpayer response recorded, audit case concluded for the issued assessment notice if accepted, and reports generated. Escalation: The case proceeds to objection review, appeal procedures, or fraud investigation.
Exceptions:	• The system fails to generate the assessment notice within performance thresholds; the Authorized Tax Official manually prepares the notice using templates and records the system issue for IT resolution. • The taxpayer cannot be reached for delivery of the assessment notice; alternative delivery methods are attempted, and if unsuccessful, the notice is considered constructively delivered as per legal provisions. • The management reporting system is unavailable; audit staff manually compile key performance indicators from available records and document the system unavailability.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 127 of 154

Business Rules	BR-001: Assessment notices must only be issued after approval of the audit report. BR-002: Taxpayers must be allowed to accept or object to the audit findings. BR-003: Objections must be submitted within the legally defined period.
Information Requirements	● Final transfer pricing audit report. ● Approved audit notice templates (assessment notice format). ● Taxpayer contact information and authorized representative details. ● Taxpayer response (acceptance, objection, or payment plan request). ● Assessment calculation details (principal, penalties, interest). ● Delivery confirmation and acknowledgment records. ● Objection and appeal documentation (if applicable). ● Fraud referral documentation (if applicable). ● Management reports (assessment amounts, penalties, appeals, audit yield, productivity, KPIs). ● Audit case closure checklist.
Assumptions:	● The taxpayer has received the final audit report and had the opportunity to review findings before assessment notice issuance. ● The Authorized Tax Official has the legal authority to issue assessment notices. ● The Transfer Pricing Process Owner is available to review and approve assessment notices. ● The objection and appeal process is defined and available for cases where the taxpayer disagrees.

	Company Name: የኢንፎርሜሽን መረብ ደህንንት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION		Issue No.: 3	Page No.: Page 128 of 154

	Management reporting requirements and KPIs are predefined by tax administration leadership.
Notes & Issues	- The taxpayer must be formally informed of the audit results before the case is concluded. - The assessment notice represents the official determination of tax adjustments resulting from the transfer pricing audit. - The taxpayer retains the right to object to the assessment according to applicable tax laws.

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 130 of 154

Use Case ID	BUC-TA-019
Use Case Name	Conduct Entry Conference with Taxpayer
Description	Schedule, conduct/perform, and document the formal initial meeting between the auditor and taxpayer to start the audit process.
Actors	• Primary Actor - Auditor • Secondary Actor - Taxpayer, Tax Agent/representative and Team Leader
Pre-Condition	• An audit case has been assigned to the auditor. • The auditor has reviewed the case file. • The auditor has determined that an entry conference is needed/necessary.
Triggers	The auditor decides an entry conference is required after the case assignment.
Normal Work	1. The auditor prepares for the entry conference by planning interview details and listing required documents. 2. The auditor proposes a date, time, and venue/place for the meeting using the system calendar. 3. send the meeting invitation to the taxpayer via email, portal notification, or printed letter. 4. The taxpayer receives the invitation and confirms attendance through the portal or by reply.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 131 of 154

	- records the confirmation and notifies the auditor. - The auditor conducts the entry conference with the taxpayer. - Auditor captures meeting results, findings on internal controls, and inspection of premises in the system. - Auditor uploads audio recordings of the conference (if applicable). - The auditor submits interview records to the team leader for review. - Team leader reviews and approves the interview records. - send official interview documentation to the taxpayer/tax agent. - Taxpayer confirms receipt of interview documentation. - notifies the auditor of the confirmed receipt.
Alternative Flow	AF1. Taxpayer Requests Reschedule (Go back to Step 2) Trigger: Taxpayer cannot attend the proposed meeting time. Flow: - The taxpayer receives the invitation. - The taxpayer requests a different date/time through the portal. - The auditor reviews the request. - The auditor either accepts the new time or proposes an alternative.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 132 of 154

	5. Process continues from Step 2 of Normal Workflow with updated schedule. AF2. Taxpayer Does Not Respond (Continue to Step 6) Trigger: Taxpayer does not respond within configured days. Flow: 1. The system sends automatic reminders to taxpayers. 2. If still no response after configured reminders, the auditor is notified. 3. The auditor may proceed with the audit without the conference or escalate to the supervisor. 4. Process continues from Step 6 of Normal Workflow (meeting may be skipped). AF3. Team Leader Rejects Records (Go back to Step 7) Trigger: Team leader finds issues with the interview records. Flow: 1. The team leader reviews the interview records. 2. Team leader rejects with comments. 3. Auditor receives rejection notification. 4. The auditor updates records based on comments. 5. Process continues from Step 7 of Normal Workflow.
Post-Condition	Success: Entry conference completed, records documented and approved, taxpayer confirmed receipt. Pending: Meeting scheduled but not yet conducted, or records pending approval. Cancelled: Meeting cancelled, no further action for this BUC.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 133 of 154

Exceptions	• The designated interview room is double-booked – the auditor must coordinate with the venue manager or reschedule. • The taxpayer fails to show up without prior notice – the auditor may document the absence and proceed with the audit using available information. • The team leader is unavailable to approve records – the approval may be delegated to another authorised manager.
Business Rules	BR-001: Entry conferences must be held in designated interview rooms, not in general tax office areas. BR-002: Meeting invitations must be sent at least [X] days before the proposed date (configurable). BR-003: Taxpayer confirmation must be recorded in the system before the meeting can be considered confirmed. BR-004: All interview records must be approved by a team leader before being sent to the taxpayer. BR-005: Audio recordings, if made, must be uploaded and stored as part of the permanent case record.
Non-Functional Req.	Performance: Calendar operations and invitation sending must complete within 2 seconds. Usability: Calendar interface should be intuitive with drag-and-drop scheduling capabilities.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 134 of 154

	Reliability: Reminder system must trigger at exactly the configured times. Security: All communications must be encrypted. Taxpayer confirmation must be authenticated. Audit: All scheduling changes, confirmations, and record approvals must be logged with user ID and timestamp.
Notes	• General rule: taxpayers should not be in general tax office areas except designated interview rooms. • The system should send automatic reminders to both auditor and taxpayer as the meeting date approaches. • Entry conference records become part of the permanent audit case file.
Information Requirements	Meeting invitation letters, Interview notes, Audio recordings and Confirmation receipts
Assumptions	• The taxpayer is willing to cooperate and attend the meeting. • Audio recording is permitted by law and the taxpayer consents (if required). • The tax office has sufficient interview rooms for scheduled conferences. • All times are based on the tax office's local business hours.

1.21 Manage Taxpayer Communication Portal

Attribute	Description
Use Case ID	BUC-TA-020
Use Case Name	Manage Taxpayer Communication Portal

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 136 of 154

Description	Provide a secure online portal for taxpayers to receive notifications, view audit status, upload documents, and communicate with auditors throughout the audit process.
Actors	• Primary Actor - Taxpayer, Tax Agent • Secondary Actor - Administrator
Pre-Condition	• Taxpayers are registered in the system. • The taxpayer has login credentials.
Triggers	Taxpayer logs into the portal, New notification is sent to taxpayer and Auditor requests documents from taxpayer.
Normal Workflow	1. The taxpayer logs into the secure portal using credentials. 2. The system displays a taxpayer dashboard with active audits, notifications, and pending requests. 3. Taxpayers view new notifications (document requests, meeting invitations, and audit reports). 4. Taxpayer selects a document request and uploads required files. 5. validates file format and size. 6. The system stores the uploaded document and links it to the audit case. 7. The system notifies the auditor that documents have been uploaded. 8. Taxpayer views audit progress and status updates. 9. Taxpayers confirm receipt of audit reports or notices when required.

	10. Taxpayers can send secure messages to the auditor with questions. 11. The auditor receives messages and can respond through the system.
Alternative Flow	AF1. Invalid File Format (Go back to Step 4) Trigger: Taxpayer uploads an unsupported file type. Flow: 1. Taxpayer attempts to upload a file. 2. System rejects the file due to unsupported format. 3. System displays allowed file formats. 4. Taxpayer converts or replaces the file. 5. Process continues from Step 4 of Normal Workflow. AF2. File Too Large (Go back to Step 4) Trigger: Uploaded file exceeds size limit. Flow: 1. Taxpayer attempts to upload a file. 2. The system rejects the file due to the size limit. 3. The system displays the maximum allowed size. 4. The taxpayer compresses or splits the file. 5. Process continues from Step 4 of Normal Workflow. AF3. Forgotten Password (Resume after reset) Trigger: Taxpayer cannot log in. Flow:

ከመጠቀም በፊት ትክክለኛው ቅጽ መሆኑን ያረጋግጡ።

PLEASE MAKE SURE THAT THIS IS THE CORRECT ISSUE BEFORE USE

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 138 of 154

	1. Taxpayer clicks "Forgot Password". 2. The system sends a password reset link to registered email. 3. Taxpayer resets password. 4. The taxpayer logs in with new credentials. 5. Process continues from Step 2 of Normal Workflow. AF4. Document Request Expired (Notify auditor) Trigger: Taxpayer tries to upload documents after the deadline. Flow: 1. Taxpayer attempts to upload for a past-due request. 2. The system blocks the upload. 3. The system notifies taxpayers to contact the auditor. 4. The system notifies the auditor of the attempted late upload. 5. Use case ends.
Post-Condition	Success: Taxpayer successfully views information, uploads documents, and communicates with the auditor. Partial: Some actions completed (e.g., viewed notifications but didn't upload all requested documents).
Exceptions	• The taxpayer forgets their password – the system provides a self-service password reset option. • The taxpayer uploads an unsupported file type – they must convert the file to an accepted format (PDF, JPEG, PNG, Excel, Word). • The taxpayer attempts to upload after the deadline – the request is considered overdue, and the auditor may issue a reminder or an estimated assessment.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 139 of 154

Business Rules	BR-006: Allowed file formats: PDF, JPEG, PNG, Excel, Word (configurable by administrator). BR-007: Maximum file size: [XX] MB (configurable). BR-008: Document uploads must be linked to the specific audit case and request. BR-009: All communications through the portal must be logged and stored in the case file. BR-010: Taxpayers must confirm receipt of critical documents (assessment notices, final reports). BR-011: Portal sessions must time out after [XX] minutes of inactivity.
Non-Functional Req.	Performance: Page load times under 3 seconds. Uploads under 5 seconds for typical files. Security: HTTPS , Two-factor authentication option, Session timeout and Brute force protection. Usability: Mobile-responsive design, Clear navigation and Progress indicators for uploads. Availability: 99.5% uptime during business hours. Scalability: Support for concurrent users during peak filing seasons.
Notes	The portal is the primary channel for taxpayer-auditor communication, All actions in the portal create audit trail entries and Notifications should also be sent via email/SMS for critical updates.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 140 of 154

Information Requirements	Uploaded taxpayer documents, Notifications and alerts, Secure messages and Confirmation receipts
Assumptions	• The taxpayer has access to a computer or mobile device with the internet. • The taxpayer understands how to use the portal (training materials are provided). • Critical communications (assessment notices, final reports) are also sent via email or SMS as a backup. • The portal is available during standard business hours with planned maintenance announced in advance.

1.22 Execute Joint Audit

Attribute	Description
Use Case ID	BUC-TA-023
Use Case Name	Execute Joint Audit
Description	Enable multiple tax authorities to collaborate on a single taxpayer audit through a shared workspace with coordinated actions, shared documents, and unified reporting.
Actors	• Primary Actor - Joint Audit Team (members from multiple authorities) • Secondary Actor - Joint Audit Committee, Taxpayer, Tax Agent and Team Leader
Pre-Condition	• A joint audit case has been created and assigned. • Joint audit team members have been assigned from participating authorities. • All team members have system access.
Triggers	The Joint Audit Committee approves the case for joint audit execution.
Normal Workflow	1. Joint audit team members access the shared case workspace. 2. The system displays all taxpayer information in one place. 3. The team conducts Computer Assisted Audit Techniques (CAAT) if the taxpayer is eligible. 4. The team checks whether the financial statements are accurate and truthful.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 142 of 154

	5. If the team needs more information, they send questions or document requests. 6. Taxpayers upload requested documents through the portal. 7. The team compares the taxpayer's data with similar businesses in the same industry. 8. Team requests and matches third-party data (customs, banks, etc.). 9. The team checks assets, expenditure, and income testing. 10. Team answers and closes the questions. 11. The team prepares a report describing the audit work done and sends it to the committee. 12. The committee reviews and approves the report. 13. The team drafts the joint official audit report. 14. The report is routed through multi-level approvals based on thresholds. 15. The final approved report is sent to the taxpayer for review. 16. Taxpayers accept or raise objections within configured days. 17. If accepted, the audit completion process begins. 18. If fraud is indicated, a case is sent to investigation.
Alternative Flow	AF1. CAAT Not Eligible (Skip to Step 4) Trigger: Taxpayer is not eligible for computer-assisted audit. Flow: 1. The system checks CAAT eligibility. 2. Taxpayers do not meet criteria. 3. System flags as manual audit required.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 143 of 154

	4. Process continues from Step 4 of Normal Workflow. AF2. Taxpayer Objects to Report (Continue to dispute) Trigger: Taxpayer raises objections to audit findings. Flow: 1. Taxpayer reviews audit report. 2. The taxpayer raises formal objections within the allowed period. 3. System records objections. 4. Joint team reviews objections. 5. Process may lead to revised report or escalation. AF3. Multi-Zone Taxpayer (Generate segregated reports) Trigger: Taxpayer operates in multiple zones/regions. Flow: 1. The system identifies multi-zone operations. 2. Audit findings are captured per zone. 3. The system generates consolidated reports at region level. 4. Segregated reports are also generated per zone. 5. Process continues from Step 13 of Normal Workflow. AF4. Report Rejected at Approval (Go back to Step 13) Trigger: Approver rejects the draft report. Flow: 1. The report is routed for approval. 2. Approver rejects with comments. 3. Team receives rejection notification. 4. Team revises report based on comments. 5. Process continues from Step 13 of Normal Workflow.
--	--

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 144 of 154

Post-Condition	Success: Joint audit completed, report approved, sent to taxpayer, and accepted or disputed. Escalated: Case sent for fraud investigation. Disputed: Taxpayer objections received, case moves to dispute resolution.
Exceptions	- One participating tax authority cannot access shared data due to legal restrictions – the audit proceeds with available data, and the limitation is documented. - The joint audit committee cannot reach a quorum – the decision is postponed until a later meeting. - The taxpayer objects to the joint audit process – the case may be handled unilaterally or escalated to higher management.
Business Rules	BR-012: All joint audit team members have equal access to the shared case file. BR-013 : CAAT eligibility criteria are configurable by administrators. BR-014: Multi-level approval thresholds are configurable (e.g., >\$50k requires director approval). BR-015: Taxpayer objection period is configurable (default 30 days). BR-016: Clear criteria must be configured to label cases as potential fraud.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 145 of 154

Non-Functional Req.	Performance: Shared workspace access under 2 seconds. Real-time updates for all team members. Collaboration: Simultaneous editing support with change tracking. Comments and annotations. Security: Role-based access control per participating authority. Data isolation where required by law. Reliability: High availability during joint audit activities. Compliance: Must support different legal requirements of participating jurisdictions.
Notes	- Joint audits may involve international tax authorities with different legal frameworks. - The system must handle language differences (if applicable). - All communications and actions are visible to all authorized team members.
Information Requirements	Joint audit plan, Query sheets, Taxpayer documents, Third-party data, Audit execution reports, Draft and final audit reports and Assessment notices
Assumptions	- All participating authorities have compatible data exchange standards. - Language differences are handled by the system (e.g., UTF-8 support, translation tools). - The shared workspace can handle up to 50 concurrent users without performance degradation.

- Each authority's legal framework allows data sharing as described.

1.23 Complete and Finalize Audit

Attribute	Description
Use Case ID	BUC-TA-022
Use Case Name	Complete and Finalize Audit
Description	Finalize audit results, prepare and index working papers, conduct exit conferences, prepare final reports, issue assessment notices, handle taxpayer response, and close the case.
Actors	• Primary Actor - Auditor • Secondary Actor - Team Leader, Process Owner, Taxpayer, Tax Agent, Authorized Official
Pre-Condition	• Audit fieldwork is completed. • All evidence has been gathered and analyzed. • Audit findings are documented.
Triggers	The auditor determines that audit execution is complete and ready for finalization.
Normal Workflow	1. Auditor prepares, indexes, and stores all audit working papers in the system. 2. Auditor prepares draft audit report and sets agenda for exit conference. 3. The auditor submits a draft report and agenda to the team leader for review. 4. Team leader reviews and approves draft report and agenda.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION		Issue No.: 3	Page No.: Page 148 of 154

	5. The system notifies taxpayers of exit conferences and requests attendance confirmation. 6. The taxpayer confirms attendance or requests rescheduling. 7. Auditor conducts exit conference with taxpayer to discuss findings. 8. Auditor records exit conference notes and any supporting documents. 9. Auditor finalizes audit report based on exit conference discussions. 10. Final report is routed through approval workflow based on thresholds. 11. Upon final approval, the system generates assessment notices with a unique ID. 12. The system sends assessment notices to taxpayers (email/portal/print). 13. If undelivered, the system records and triggers alternative outreach. 14. Taxpayer reviews notice and accepts or raises objections within configured days. 15. If accepted, the system adjusts taxpayer accounts (principal, penalties, interest). 16. System updates case status to "Closed". 17. Complete history of all audit actions is maintained for future reference.
Alternative Flow	AF1. Taxpayer Requests Reschedule Exit Conference (Go back to Step 5)

Page No.:

Page 149 of
154**Trigger:** Taxpayer cannot attend scheduled exit conference.**Flow:**

1. The taxpayer receives notification.
2. Taxpayers request different dates/times.
3. Auditor reviews and approves new schedule.
4. Process continues from Step 5 of Normal Workflow.

AF2. Team Leader Rejects Draft Report (Go back to Step 2)**Trigger:** Team leader finds issues with draft report.**Flow:**

1. Team leader reviews draft report.
2. Team leader rejects with comments.
3. Auditor revises report based on comments.
4. Process continues from Step 2 of Normal Workflow.

AF3. Notice Undelivered (Continue to alternative outreach)**Trigger:** Assessment notice is returned as undelivered.**Flow:**

1. The system sends notices electronically.
2. Notice bounces or is returned.
3. System records as undelivered.
4. The system triggers alternative outreach (post, affix to premises, newspaper).
5. The process continues from Step 12 of Normal Workflow with an alternative method.

AF4. Taxpayer Objects to Notice (Continue to dispute)**Trigger:** Taxpayer raises formal objection.**Flow:**

	1. Taxpayer reviews notice. 2. Taxpayers raise objections within the allowed period. 3. System records objection. 4. Case moves to internal review process. 5. Audit completion pauses pending review outcome. AF5. Estimated Assessment Required (Special workflow) Trigger: Taxpayer did not provide sufficient information. Flow: 1. The auditor prepares estimated assessments based on best judgment. 2. Team leader/process owner must review and approve estimated assessment. 3. Upon approval, the process continues from Step 11 of Normal Workflow. 4. All modifications to estimated assessment are tracked in the audit trail. AF6. Fraud Indicated (Escalate to investigation) Trigger: During finalization, potential fraud is detected. Flow: 1. The auditor or team leader identifies fraud indicators. 2. The case is flagged for fraud investigation. 3. The system triggers a fraud investigation sub-process. 4. Audit completion pauses.
	Post-Condition Success: Audit completed, notice delivered, taxpayer accepted, case closed.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 151 of 154

	Disputed: Taxpayer objected, case moved to review. Investigation: Fraud suspected, case sent to investigation. Pending: Awaiting taxpayer response or alternative delivery.
Exceptions	• The taxpayer does not respond to the assessment notice – the system treats non-response as acceptance and issues the final notice. • The taxpayer requests an extension to object – the auditor may grant a reasonable extension if justified. • The assessment notice is returned as undelivered – the auditor must use alternative channels (physical mail, newspaper publication) as per tax law.
Business Rules	BR-017: All working papers must be indexed and stored before the final report is approved. BR-18: Exit conference must be offered to the taxpayer before finalizing the report. BR-019: Approval thresholds are configurable (e.g., assessments over \$X require director approval). BR-020: Taxpayer objection period is configurable (default 30 days). BR-021: Undelivered notices must trigger alternative outreach within [X] days. BR-022: Estimated assessments require mandatory supervisory approval. BR-023: All changes to assessments must be logged in the audit trail.

	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 152 of 154

Non-Functional Req.	Performance: Notice generation under 3 seconds. Batch printing under 60 seconds for 1000 notices. Usability: Standard letter templates with auto-population of taxpayer data. Security: Electronic signatures must be authenticated and non-repudiable. Audit: Complete audit trail of all actions, changes, and approvals. integration: Must update taxpayer account upon assessment acceptance.
Notes	• This BUC applies to all audit types (Desk, Comprehensive, TP, Issue, Joint). • The system must support both electronic and physical delivery of notices. • Historical data must be preserved even after case closure.
Information Requirements	Audit working papers, Draft audit report, Exit conference agenda and notes, Final audit report, Assessment notice, Confirmation receipts and Undelivered notice records.
Assumptions	• The taxpayer understands the legal consequences of not responding to the assessment notice. • The tax authority has the legal right to issue estimated assessments when the taxpayer fails to provide sufficient information. • Electronic signatures are legally equivalent to handwritten signatures.

1.24 Conduct Quality Assurance Review

Attribute	Description
Use Case ID	BUC-TA-023
Use Case Name	Conduct Quality Assurance Review
Description	Select completed audit cases, Check if the audits were done correctly and according to standards, provide feedback, and track improvements to the audit process.
Actors	• Primary Actor - Quality Assurance Team • Secondary Actor - Process Owner, Original Audit Team and Team Leader
Pre-Condition	• Audit cases have been completed and closed. • Quality assurance sampling criteria are configured. • QA team members are assigned.
Triggers	Scheduled periodic review (e.g., monthly/quarterly). Manual request by management.
Normal Workflow	1. The system automatically selects completed audit cases based on a configured sampling method. 2. System assigns selected cases to QA team members based on expertise and workload. 3. The QA team creates a quality plan for how they will review the audit. 4. QA team submits action plan to team leader/process owner for approval.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 155 of 154

	- Upon approval, the QA team reviews the audit cases in detail. - The QA team documents findings and recommendations. - The QA team prepares a draft quality review report. - The QA team submits a draft report to the team leader/process owner for review. - Team leader/process owner reviews and approves the report. - If an exit conference with the original audit team is needed, the QA team prepares an agenda. - Exit conference is scheduled and conducted. - The QA team adjusts reports based on exit conference inputs. - Final report is submitted and approved. - Follow-up actions are determined (procedural adjustments, stakeholder notifications, disciplinary action). - The system tracks whether the original audit team addressed recommendations.
Alternative Flow	AF1. No Cases Selected (Use case ends) Trigger: Sampling criteria yield no cases for review. Flow: - The system runs a selection process. - No cases meet the criteria. - The system generates reports indicating no cases selected. - Use case ends. AF2. Action Plan Rejected (Go back to Step 3) Trigger: Team leader rejects the QA action plan.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No. 3	Page No.: Page 156 of 154

	Flow: 1. QA team submits action plan. 2. Team leader rejects with comments. 3. QA team revises plan. 4. Process continues from Step 3 of Normal Workflow. AF3. Exit Conference Not Required (Skip to Step 13) Trigger: QA team determines exit conference is unnecessary. Flow: 1. QA team completes review. 2. Findings are straightforward with no need for discussion. 3. Process skips Steps 10-12. 4. Process continues from Step 13 of Normal Workflow. AF4. Serious Issues Found (Escalate) Trigger: QA review reveals serious compliance or performance issues. Flow: 1. The QA team identifies major deficiencies. 2. The team leader/process owner is immediately notified. 3. Disciplinary action may be initiated. 4. The process continues with enhanced monitoring.
Post-Condition	Success: QA review completed, report approved, follow-up actions assigned and tracked. Escalated: Serious issues found, escalated to management.
Exceptions	• The QA team cannot access original audit files because they are under legal hold – the review may be limited or postponed.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 157 of 154

	- The original audit team leader is no longer employed – the QA findings are discussed with the current supervisor. - The exit conference cannot be scheduled due to conflicting priorities – the QA report may be finalised without a meeting, with a documented justification. - The audit case is already under judicial review – QA review may be deferred until the court ruling.
Business Rules	BR-024 : QA sampling methods are configurable (random, stratified, risk-based). BR-025: QA cases must be assigned based on expertise and workload balancing. BR-026: QA reports must be approved before finalization. BR-027: Follow-up actions must be tracked to completion. BR-28: QA review frequency is configurable (monthly, quarterly, etc.).
Non-Functional Req.	Performance: Case selection under 5 seconds. Report generation under 3 seconds. Usability: Comparison tools to view original audit alongside QA findings. Security: QA reports accessible only to authorized personnel. Audit: All QA actions and approvals recorded.
Notes	- QA reviews help improve audit quality over time. - Findings should feed back into auditor training programs. - Serious or repeated issues may lead to performance management.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 158 of 154

Information Requirements	QA action plan, QA review report, Exit conference agenda and notes and Follow-up action tracking
Assumptions	• The QA team is independent of the original audit team to ensure objectivity. • Management supports the QA process and will act on recommendations. • The exit conference, if held, will be conducted in good faith to improve audit quality. • Follow-up actions are tracked and reported to management periodically. • Serious compliance issues will result in corrective actions, including training or disciplinary measures.

1.25 Trigger Fraud Investigation

Attribute	Description
Use Case ID	BUC-TA-024
Use Case Name	Trigger Fraud Investigation
Description	Automatically or manually escalate cases to the Intelligence and Fraud Investigation team when suspicious activity is detected during any stage of the audit process.
Actors	• Primary Actor - Auditor, System (automatic trigger) and Team Leader • Secondary Actor - Process Owner and Investigation
Pre-Condition	• An active audit case exists. • Fraud indicators are configured in the system. • The investigation team is defined.
Triggers	Auditor identifies potential fraud during audit. The system detects fraud indicators based on configured criteria. The taxpayer fails to respond within the allowed period.
Normal Workflow	1. During an audit, potential fraud is identified (by auditor/system). 2. The auditor or team leader flags the case for fraud investigation. 3. record the reason for flagging and all related evidence. 4. The case is routed to the Intelligence and Fraud Investigation team.

	Company Name: የኢንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 161 of 154

	- Investigation team receives notification of new fraud case. - The investigation team reviews the case and evidence. - The investigation team accepts the case for formal investigation. - updates case status to "Under Fraud Investigation". - The original audit process is paused or closed as appropriate. - The investigation team proceeds with a fraud investigation sub-process.
Alternative Flow	AF1. System Auto-Detects Fraud (Continue to Step 2) Trigger: System identifies fraud based on configured rules. Flow: - The system runs automated checks during the audit. - Fraud indicators are detected (e.g., pattern matching, discrepancies). - The system automatically flags the case. - The system notifies the auditor and team leader. - Process continues from Step 2 of Normal Workflow. AF2. Investigation Team Rejects Case (Return to audit) Trigger: Investigation team determines case does not meet fraud criteria. Flow: - The investigation team reviews flagged cases. - The team determines insufficient evidence or criteria not met. - The case is returned to the audit team with comments. - update case status to "Returned from Investigation".

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION	Document No.: OT/AS/001	
	Title: BUSINESS REQUIREMENT SPECIFICATION	Issue No.: 3	Page No.: Page 162 of 154

	5. Original audit process resumes. AF3. Taxpayer Non-Response Triggers Fraud (Continue to Step 1) Trigger: Taxpayer fails to respond within the required period. Flow: 1. Taxpayers are sent an audit report or notice. 2. Configurable response period expires with no response. 3. The system automatically flags for fraud investigation. 4. Process continues from Step 1 of Normal Workflow.
Post-Condition	Accepted: Case transferred to investigation team, audit paused. Rejected: Case returned to audit team, investigation not pursued. Auto-Triggered: System flagged case, waiting for investigation team review.
Exceptions	• The investigation team determines that the evidence does not meet the legal threshold for fraud – the case is returned to the audit team with guidance. • The taxpayer provides a valid explanation for the suspected irregularity before the investigation starts – the auditor may withdraw the fraud flag. • The investigation team is overloaded with cases – the response may be delayed; management must prioritise. • The suspected fraud involves a senior official – the case must be escalated to an independent ethics committee.

	Company Name: የኢ.ንፎርሜሽን መረብ ደህንነት አስተዳደር INFORMATION NETWORK SECURITY ADMINISTRATION		Document No.: OT/AS/001	
	Title BUSINESS REQUIREMENT SPECIFICATION		Issue No. 3	Page No.: Page 163 of 154

Business Rules	BR-029: Fraud indicators must be clearly configured and approved by management. BR-030: Cases flagged for fraud must include all relevant evidence and documentation. BR-031: The investigation team must respond within [X] days of receiving a flagged case. BR-032: Taxpayer non-response after [configurable] days triggers automatic fraud review. BR-033: Fraud investigation takes precedence over regular audit processes.
Non-Functional Req.	Performance: Case transfer to investigation team under 2 seconds. Security: Fraud cases must have enhanced access restrictions. Audit: Complete trail of who flagged the case, when, and why. Integration: Seamless handoff between audit processes and investigation processes.
Notes	- Clear criteria must be defined to label cases as potential fraud. - Fraud investigation is a separate process with its own workflows. - Legal protocols may require special handling of fraud cases.
Information Requirements	Fraud flagging form with reasons, Evidence collected during audit, Case transfer record and Investigation team response
Assumptions	The auditor is trained to recognise fraud indicators and knows when to escalate.

- The investigation team has the legal authority and resources to conduct a full inquiry.
- The taxpayer's right to be heard is respected (they are informed of the suspicion unless doing so would compromise the investigation).
- Fraud investigations take precedence over routine audits to prevent loss of revenue and evidence.
- The outcome of the investigation (substantiated or not) will be formally recorded and may lead to prosecution, penalties, or case closure.
